Slow Dynamics in Complex Systems Tōwa Daigaku. International Symposium, 1999-04-23 The book gives up to date information on slow dynamics in complex systems such as polymers emulsions colloidal suspensions glass forming liquids etc many of which exhibit glass transitions It contains review articles by leading scientists and contributed papers by authors at the forefront of research Experiments along with theories and computer simulations are emphasized

Model Emergent Dynamics in Complex Systems A. J. Roberts, 2014-12-18 Arising out of the growing interest in and applications of modern dynamical systems theory this book explores how to derive relatively simple dynamical equations that model complex physical interactions The author's objectives are to use sound theory to explore algebraic techniques develop interesting applications and discover general modeling principles Model Emergent Dynamics in Complex Systems unifies into one powerful and coherent approach the many varied extant methods for mathematical model reduction and approximation Using mathematical models at various levels of resolution and complexity the book establishes the relationships between such multiscale models and clarifying difficulties and apparent paradoxes and addresses model reduction for systems resolves initial conditions and illuminates control and uncertainty The basis for the author's methodology is the theory and the geometric picture of both coordinate transforms and invariant manifolds in dynamical systems in particular center and slow manifolds are heavily used The wonderful aspect of this approach is the range of geometric interpretations of the modeling process that it produces simple geometric pictures inspire sound methods of analysis and construction Further pictures drawn of state spaces also provide a route to better assess a model's limitations and strengths Geometry and algebra form a powerful partnership and coordinate transforms and manifolds provide a powerfully enhanced and unified view of a swathe of other complex system modeling methodologies such as averaging homogenization multiple scales singular perturbations two timing and WKB theory

Slow Dynamics in

Complex Systems ,2013 **4th International Symposium on Slow Dynamics in Complex Systems** ,2013 An Introduction to Complex Systems Paul Fieguth,2021-09-03 Complex Systems lie at the heart of a variety of large scale phenomena of great significance global warming ice ages water poverty pandemics and this text uses these case studies as motivations and contexts to explore complex systems and related topics of nonlinear dynamics and power law statistics Although detailed mathematical descriptions of these topics can be challenging the consequences of a system being nonlinear power law or complex are in fact quite accessible This book blends a tutorial approach to the mathematical aspects of complex systems together with a complementary narrative on the global ecological societal implications of such systems Nearly all engineering undergraduate courses focus on mathematics and systems which are small scale linear and Gaussian Unfortunately there is not a single large scale ecological or social phenomenon that is scalar linear and Gaussian This book offers insights to better understand the large scale problems facing the world and to realize that these cannot be solved by a single narrow academic field or perspective Instead the book seeks to emphasize understanding concepts and ideas in a way that is mathematically rigorous so that the concepts do not feel vague but not so technical that the mathematics get in the way The book is intended for students in technical domains such as engineering computer science physics mathematics and environmental studies This second edition adds nine new examples over 30 additional problems 50 additional figures and three new chapters offering a detailed study of system decoupling extensive solutions to chapter problems and a timely discussion on the complex systems challenges associated with COVID 19 and pandemics in general **A Complex Systems Approach to Epilepsy** Rod C. Scott,J. Matthew Mahoney,2023-01-26 The epilepsies are devastating neurological disorders for which progress developing effective new therapies has slowed over recent decades primarily due to the complexity of the brain at all scales This reality has shifted the focus of experimental and clinical practice toward complex systems approaches to overcoming current barriers Organized by scale from genes to whole brain the chapters of this book survey the theoretical underpinnings and use of network and dynamical systems approaches to interpreting and modeling experimental and clinical data in epilepsy The emphasis throughout is on the value of the non trivial and often counterintuitive properties of complex systems and how to leverage these properties to elaborate mechanisms of epilepsy and develop new therapies In this essential book readers will learn key concepts of complex systems theory applied across multiple scales and how each of these scales connects to epilepsy *Stochastic Pdes And Modelling Of Multiscale Complex System* Xiaopeng Chen,Yan Lv,Wei Wang,2019-05-07 This volume is devoted to original research results and survey articles reviewing recent developments in reduction for stochastic PDEs with multiscale as well as application to science and technology and to present some future research direction This volume includes a dozen chapters by leading experts in the area with a broad audience in mind It should be accessible to graduate students junior researchers and other professionals who are interested in the subject We also take this opportunity to celebrate the contributions of Professor Anthony J Roberts an internationally

leading figure on the occasion of his 60th years birthday in 2017

Molecular Mobility in Deforming Polymer Glasses

Nikhil Padhye, 2021-10-15 This book bridges disparate fields in an exploration of the phenomena and applications surrounding molecular mobility in glassy materials experiencing inelastic deformation. The subjects of plastic deformation and polymer motion interdiffusion currently belong to the two different fields of continuum mechanics and polymer physics respectively. However, molecular motion associated with plastic deformation is a key ingredient to gain fundamental understanding both at the macroscopic and microscopic level. This short monograph provides necessary background in the aforementioned fields before addressing the topic of molecular mobility accompanied by macroscopic inelastic deformation in an accessible and easy to understand manner. A new phenomenon of solid state deformation induced bonding in polymers is discussed in detail along with some broad implications in several manufacturing sectors. Open questions pertaining to mechanisms, mechanics, and modeling of deformation induced bonding in polymers are presented. The book's clear language and careful explanations will speak to readers of diverse backgrounds.

Reviews of Nonlinear Dynamics and Complexity

Heinz Georg Schuster, 2009-07-10 Adopting a cross disciplinary approach, the review character of this monograph sets it apart from specialized journals. The editor is advised by a first class board of international scientists such that the carefully selected and invited contributions represent the latest and most relevant findings.

Power Grid Complexity

Shengwei Mei, Xuemin Zhang, Ming Cao, 2011-09-15 Power Grid Complexity introduces the complex system theory known as self organized criticality (SOC) theory and complex network theory and their applications to power systems. It studies the network characteristics of power systems such as their small world properties, structural vulnerability, decomposition and coordination strategies, and simplification and equivalence methods. The book also establishes four blackout models based on SOC theory through which the SOC of power systems is studied at both the macroscopic and microscopic levels. Additionally, applications of complex system theory in power system planning and emergency management platforms are also discussed in depth. This book can serve as a useful reference for engineers and researchers working with power systems. Shengwei Mei is a Professor at the Department of Electrical Engineering at Tsinghua University, China. Xuemin Zhang is a Lecturer at the Department of Electrical Engineering at Tsinghua University, China. Ming Cao is an Assistant Professor at the Faculty of Mathematics and Natural Sciences at the University of Groningen, the Netherlands.
