**Small Water Impoundments in Semi-arid Regions** John L. Thames, Charles D. Ziebell, 1988-01-01 Columbia Basin Water Withdrawal Environmental Review (ID, MT, OR, WA), 1979 **Ecology of Desert Systems** Walter G. Whitford, Benjamin D. Duval, 2019-08-20 Nearly one third of the land area on our planet is classified as arid or desert. Therefore an understanding of the dynamics of such arid ecosystems is essential to managing those systems in a way that sustains human populations. This second edition of *Ecology of Desert Systems* provides a clear, extensive guide to the complex interactions involved in these areas. This book details the relationships between abiotic and biotic environments of desert ecosystems, demonstrating to readers how these interactions drive ecological processes. These include plant growth and animal reproductive success, the spatial and temporal distribution of vegetation and animals, and the influence of invasive species and anthropogenic climate change specific to arid systems. Drawing on the extensive experience of its expert authors, *Ecology of Desert Systems* is an essential guide to arid ecosystems for students looking for an overview of the field, researchers keen to learn how their work fits in to the overall picture, and those involved with environmental management of desert areas. Highlights the complexity of global desert systems in a clear, concise way. Reviews the most current issues facing researchers in the field, including the spread of invasive species due to globalized trade, the impact of industrial mining, and climate change. Updated and extended to include information on invasive species management, industrial mining impacts, and the current and future role of climate change in desert systems. BlueDrop Series: Rain water harvesting and Utilisation, *Bibliography of Agriculture*, 1991-04 **Human Intervention in the Climatology of Arid Lands** Donald R. Haragan, 1990 **Little Snake Resource Management Plan**, 2010 *Contribution of the Committee on Desert and Arid Zones Research*, 1989 Papers presented at symposia held during the association's annual meetings **Wetland and Riparian Areas of the Intermountain West** Mark C. McKinstry, Wayne A. Hubert, Stanley H. Anderson, 2004-07-01 Wetlands and riparian areas between the Rocky Mountains and the Sierra Nevada are incredibly diverse and valuable habitats. More than 80 percent of the wildlife species in this intermountain region depend on these wetlands, which account for less than 2 percent of the land area for their survival. At the same time, the wetlands also serve the water needs of ranchers and farmers, recreationists, vacation communities, and cities. It is no exaggeration to call water the liquid gold of the West, and the burgeoning human demands on this scarce resource make it imperative to understand and properly manage the wetlands and riverine areas of the Intermountain West. This book offers land managers, biologists, and research scientists a state-of-the-art survey of the ecology and management practices of wetland and riparian areas in the Intermountain West. Twelve articles examine such diverse issues as laws and regulations affecting these habitats, the unique physiographic features of the region, the importance of wetlands and riparian areas to fish, wildlife, and livestock, the ecological function of these areas, their value to humans, and the methods to evaluate these habitats. The authors also address the human impacts
