**Through the Ages** Robert E. Krebs, 1999-02-28 The evolution of science through the ages has often been marred by people s misconceptions From pre historic times when myths played a major role in people s lives to present day debates concerning the environment people have sought ways to explain the world around them and have often come up with incorrect answers Science has grown through the correction of these misconceptions This unique reference source can be used by students teachers and other interested researchers to explore this growth as it pertains to both the field of science and the process of scientific experimentation Readers will discover how misunderstandings led to further experimentation and eventually to scientific facts These false paths to scientific knowledge are not treated as deliberate misconduct but rather as a lack of knowledge and a misunderstanding of the science and technology involved both of which were sooner or later corrected by men and women of science Krebs explores the conception and development of scientific thought in five different fields Medicine and Health Life Science Chemistry and Physics Astrology Astronomy and Cosmology and Conservation Ecology and Environmentalism Within each of these categories he explores more specific areas such as the circulatory system geology and inner planets This arrangement provides easy access for the researcher interested in a particular area of science as well as those looking for general information illuminating how our modern understanding of science is based on much of the developments in our ancient past      *The Library-Classroom Partnership* Rosann Jweid, Margaret Rizzo, 1998-06-25 The

purpose of The Library Classroom Partnership is to assist library teachers and classroom teachers to effectively use the library and its resources as an extension of the classroom As in the earlier edition the lessons included in this book stress the library media skills needed by individuals for lifelong learning Long after adults have forgotten a particular fact of history or the techniques of balancing an equation they continue to use library skills to answer their questions and to meet the demands of an ever changing society It has been well documented that the skills taught in a library are most effectively learned within the context of classroom work To this end the librarian and the teacher must form a working team to take each other's ideas and develop them into effective learning experiences for students The authors have incorporated the teaching of those library media skills with every discipline taught in the school Through these lessons students will realize that research and reference are a vital part of the learning process complementing and enriching every subject The eleven disciplines English mathematics social studies science art music home and careers technology physical education health and foreign language normally taught in the junior high and middle schools are addressed in this work To be included a lesson must be a learning experience in both the library skills and the subject areas Each unit has been cooperatively developed using the expertise of the school library media specialist and the subject teacher All lessons have been implemented successfully in the junior high and middle school environment This revised and expanded edition of The Library Classroom Partnership also deals with technology and the changing economic and social conditions affecting public schools It includes a new section on reading enrichment as well as instruction in accessing information electronically
