Adolescence Joseph Adelson,2017-07-05 There is a widespread and deep awareness that all is not well with American public education nor with the students educators and administrators who are charged with making citizens literate Joseph Adelson's work has gained considerable prominence in this ongoing reevaluation Writing with force verve and the tools of advanced study Adelson's book provides what might be the most comprehensive look at American education since the work of Diane Ravitch The materials include revised and updated versions of essays that caused a real stir when they first appeared in the pages of Commentary Daedalus The American Scholar and The Public Interest among other places The work goes against the grain of rhetoric but quite with the grain of the best in social science That the erosion of trust in the American young has been far less severe than in the American old that the degree of pathology alienation and rebelliousness in the American adolescent population is far from alarming On the whole each and every serious research study shows the vast majority of teenagers to be competent purposeful at ease with themselves and closely bonded to their families and their values This is however no Pollyannish version of American education but a tough minded critique of educators and administrators who prefer ideological generalities to empirical truths and whose vested interests are not in the requirements of learning but ultimately in its subversion The invention of adolescence was a search for a problem child more nearly detected in problematic adults **The Chinese HEART in a Cognitive Perspective** Ning Yu,2009-02-26 This book is a cognitive

semantic study of the Chinese conceptualization of the heart traditionally seen as the central faculty of cognition The Chinese word xin which primarily denotes the heart organ covers the meanings of both heart and mind as understood in English which upholds a heart head dichotomy In contrast to the Western dualist view Chinese takes on a more holistic view that sees the heart as the center of both emotions and thought The contrast characterizes two cultural traditions that have developed different conceptualizations of person self and agent of cognition The concept of heart lies at the core of Chinese thought and medicine and its importance to Chinese culture is extensively manifested in the Chinese language Diachronically this book traces the roots of its conception in ancient Chinese philosophy and traditional Chinese medicine Along the synchronic dimension it not only makes a systematic analysis of conventionalized expressions that reflect the underlying cultural models and conceptualizations as well as underlying conceptual metaphors and metonymies but also attempts a textual analysis of an essay and a number of poems for their metaphoric and metonymic images and imports contributing to the cultural models and conceptualizations It also takes up a comparative perspective that sheds light on similarities and differences between Western and Chinese cultures in the understanding of the heart brain body mind self and person The book contributes to the understanding of the embodied nature of human cognition situated in its cultural context and the relationship between language culture and cognition
