Sixteen Dimensions Of The Population Problem Worldwatch Paper:

Beyond Malthus Lester Russell Brown, Gary T. Gardner, Brian Halweil, 1998 This study looks at 16 dimensions or effects of population growth in order to gain a better perspective on how future population trends are likely to affect the human prospect The evidence gathered here indicates that the rapid population growth prevailing in a majority of the world's countries is not going to continue much longer Either countries will get their act together shifting quickly to smaller families or death rates will rise from one or more stresses such as AIDS ethnic conflicts or water shortages The sixteen topics are grain production fresh water biodiversity climate change oceanic fish catch jobs cropland forests housing energy urbanization natural recreation areas education waste meat production and income Excerpt

The Environment in Anthropology Nora Haenn, Richard Wilk, 2006 Presenting ecology and current environmental studies from an anthropological point of view this book gives readers a strong intellectual foundation as well as offering practical tools for solving environmental problems

Fighting The Wrong Enemy Edward Graham, 2000-09-01 Antiglobalist forces have been gaining greater momentum in recent years in their efforts to reverse what they view as the negative effects of an integrating global economy Their influence was felt earlier when efforts to create a Multilateral Agreement on Investment MAI ended in failure in 1998 after France left the bargaining table at the Organization for Economic Cooperation and Development effectively killing the initiative In this book through an evaluation of the MAI itself and the issues raised by its opponents Edward M Graham takes a fresh look at the growing backlash against globalization He first explores whether the MAI negotiations failed due to political maneuvering by antiglobalist nongovernmental organizations supported by US organized labor or because of irreconcilable differences among the negotiating parties over the substance of the issue of foreign direct investment He then objectively and thoroughly assesses antiglobalist assertions that the activities of multinational firms have had negative effects on workers both in the home investor and host recipient nations with a special focus on developing nations An important finding is that multinational firms tend to pay workers in developing nations wages that are significantly above prevailing wages Graham then examines the issue of globalized economic activity and the environment finding that economic growth in developing nations can lead to increased environmental stress but also finding that foreign direct investment can lead to reductions in this stress He finds that the worry of many environmentalists of a race to the bottom is not borne out by the evidence The final chapters assess whether or not a negotiation to create a comprehensive agreement on investment should be included in a multilateral negotiating round at the World Trade Organization in the near future The interests of developing nations in this agenda are given special attention Graham indicates that while many developing nations would accept such rules it might nonetheless be premature to press for a comprehensive agreement at this time Rather a limited investment agenda might be both more feasible and more productive

Psychology of Sustainable Development Peter Schmuck, Wesley P. Schultz, 2012-12-06 Human activity overuses the resources of the planet at a rate that

will severely compromise the ability of future generations to meet their needs Changes toward sustainability need to begin within the next few years or environmental deterioration will become irreversible Thus the need to develop a mindset of sustainable development the ability of society to meet its needs without permanently compromising the earth's resources is pressing The Psychology of Sustainable Development clarifies the meaning of the term and describes the conditions necessary for it to occur With contributions from an international team of policy shapers and makers the book will be an important reference for environmental developmental social and organizational psychologists in addition to other social scientists concerned with the impact current human activity will have on the prospects of future generations *An Introduction to World Politics* Richard Oliver Collin, Pamela L. Knutsen,2003-11 For hundreds of millennia thousands of tribal cultures have thrived throughout the planet each possessing a unique Vision derived from thousands of years of evolution With their deep ties to the world around them they experienced a communion with life which offered a spiritual sense of overwhelming interconnectedness with the land the plants the animals and each other But one culture evolved to dominate all others and linear history was created Now a new reality has been built over the former surface of the planet not only altering the biosphere but also what is available for us to interact with and relate to We struggle with the meaningless daily rote duties of our jobs We live sequestered lives in houses and apartments cut off from our neighbors woefully uninformed in a sea of trivial information Unprecedented resource extraction and energy consumption is heralding the greatest mass extinction of plant and animal life the likes of which has not been seen in the last 65 million years Cultural Vision exposes the ancient roots of these challenges as it reveals a new direction for the future of humanity based upon cooperation true human values and cultural diversity Beyond Malthus Lester R. Brown,Gary Gardner,Brian Halweil,2014-04-08 On the bicentennial of Malthus legendary essay on the tendency of population to grow more rapidly than the food supply this book examines the impacts of population growth on 19 global resources and services including food fresh water fisheries jobs education income and health Despite current hype of a birth dearth in parts of Europe and Japan the fact remains that human numbers are projected to increase by over 3 billion by 2050 Populations in rapidly growing nations are in danger of outstripping the carrying capacity of their natural support systems and governments in such situations will find it increasingly hard to respond to crises such as AIDS food and water shortages and mass unemployment Beyond Malthus examines methods such as the expansion of international family planning investment in educating young people in the developing world and promotion of a shift towards smaller families which will represent the most humane response to the possible ravages of the population explosion
