Labour Process Theory David Knights, Hugh Willmott, 2016-07-27 How are we to make sense of the way work is organised and controlled To what extent is its design the result of technological demands the interests of capital or processes of negotiation and struggle In recent years labour process analysis revived by Braverman's *Labor and Monopoly Capital* has been most influential in shaping our thinking about this question With contributions from leading authorities in the field this

book reviews the contribution of the labour process theory to the study of work organisation Providing a fresh response to criticisms of Bravermania and lost momentum the volume explores the theoretical foundations of labour process analysis and suggests new directions for its development *The Information Society Reader* with Raimo Blom,Erkki Karvonen,Harri Melin,Kaarle Nordenstreng,Ensio Puoskari, Frank Webster, Professor Frank Webster, 2020-04-02 There has been much debate over the idea of the information society Some thinkers have argued that information is becoming the key ordering principle in society whereas others suggest that the rise of information has been overstated Whatever the case it cannot be denied that informization has produced vast changes in advanced societies The Information Society Reader pulls together the main contributions to this debate from some of the key figures in the field Major topics addressed include post industrialism surveillance transformations the network society democracy digital divisions virtual relations With a comprehensive introduction from Frank Webster selections from Manuel Castells Anthony Giddens Michel Foucault and Christopher Lasch amongst others and section introductions contextualising the readings this book will be an invaluable resource for students and academics studying contemporary society and all things cyber **The Challenge Of New Technology** David Simpson,Jim Love,Jim Walker, 2019-07-11 This book looks at what has actually happened when new technology has been deployed in an industrial and commercial environment It considers the economic impact of new technology on three groups of organisations firms governments and trade unions *Citizen Participation in Decision Making* Kimani Njogu, 2013-12-29 This book is a result of public dialogue forums in pursuit of accountable and transparent governance in Kenya organized by Twaweza Communications with the support of Ford Foundation From the convenings it was evident that the stability of Kenya will be driven by the extent to which citizens feel fully included in the development agenda Quite often political leaders view the role of citizens in governance as restricted primarily to their participation in the electoral process This narrow view has led to arrogance and total disregard of citizens after poll results are announced Under the new political dispensation heralded by the promulgation of the Constitution of Kenya on August 27 2010 this trend must change and the sovereignty of the people in theory and practice must be reinscribed The publication raises important issues worth serious reflection It also suggests ways in which citizens can better participate in their own transformation Case studies highlighted in the book exemplify the importance building the Kenyan nation by addressing patterns of exclusion and glaring inequalities The topics covered include multipartism natural resource governance gender politics of identity marginalization of Coastal Kenya youth empowerment and investing in knowledge economy among others The book is a valuable addition to our understanding of the root political and social anxieties in Kenya and how these could be ameliorated **Masons, Tricksters and Cartographers** David Turnbull, 2003-09-02 In an eclectic and highly original study Turnbull brings together traditions as diverse as cathedral building Micronesian navigation cartography and turbulence research He argues that all our differing ways of producing knowledge including science are messy spatial and local Every culture has its own ways of

assembling local knowledge thereby creating space through the linking of people practices and places The spaces we inhabit and assemblages we work with are not as homogenous and coherent as our modernist perspectives have led us to believe rather they are complex and heterogeneous motleys *Reframing the Early Childhood Curriculum* Jane M. Page,2000 Argues that pre school children have a less apprehensive view of the future than adolescents and that an effective programme in the early years can counteract the difficulties youths experience Reframing the Early Childhood Curriculum Jane Page,2002-01-04 Pre school children have fundamentally different attitudes towards the future and attendant notions of time and space For this reason early childhood professionals are optimally placed to lay important foundations for young children s long term development Children s flexibility of thought their positive and constructive outlook on life their sense of the continuity of time their creativity and imagination and their sense of personal connection with time and the future are all qualities that should be recognized and addressed in early childhood educational programmes as a means of counteracting the difficulty youths experience in knowing what to expect in their future lives and coming to understand their roles in shaping them Reframing the Early Childhood Curriculum offers fresh insight into examining futurists and early childhood theorists thinking of the relevance of planning for children s long term needs in early childhood identifying the skills attitudes and outlooks required to assist young children attending early childhood programmes in their long term growth and development exploring the means through which these skills attitudes and outlooks can be achieved in curriculum frameworks through specific goals and learning experiences against the background of youth and young children s views of the future *High-tech Society* Tom Forester,1987 High Tech Society is the most definitive account available of the technology revolution that is transforming society and dramatically changing the way we live and work and maybe even think It provides a balanced and sane overview of the opportunities as well as the dangers we face from new advances in information technology In plain English Forester demystifies computerese defining and explaining a host of acronyms or computer terms now in use Tom Forester is Lecturer and Director of the Foundation Programme in the School of Computing and Information Technology Griffith University Queensland Australia He is the editor author of five books on technology and society **The Evolution of Industrial Systems** Timothy Leggatt,2018-10-31 This book first published in 1985 tackles simultaneously three major questions about the course of industrial evolution what are the features of the industrial systems that have developed outside Western capitalism What are the salient evolutionary developments now occurring in all advanced capitalist systems What light can social theory throw upon the evolution of industrial systems thus far and in the future In answering these questions the author provides an exposition of how the Soviet system works and how the Japanese system developed a critical analysis of three issues of major contemporary concern the control of giant corporations the impact of automation and the shift to service employment and a commentary on the theories of classical and contemporary social thinkers Concluding with his own conceptualisation of the determinants of industrial evolution the
