This book comprehensively summarizes the adverse effects of tobacco smoking on human health The current second edition has integrated a large set of new data that have been published in numerous scientific studies and meta analyses over the past few years Unfortunately the harmful sequelae of tobacco smoking are played down by the industry and politicians in many industrialized countries However about 800 000 people year in the EU die from the immediate consequences of smoking The particularly insidious feature of tobacco consumption is that smoking attributable harmful effects on health do not generally become apparent until three or four decades after smoking initiation Although some positive changes in the legislative handling of tobacco have appeared in the past five years we still need to form a pact sealed by politicians the medical professionals teachers and the media to target the problem across nations In this respect a minority of countries including the US and the UK have given positive examples There are four areas that need to be improved in future 1 strict bans on tobacco advertisement on a global level 2 better measures to protect against side stream passive smoke exposure 3 establishment of prevention programs especially for children and 4 treatment of tobacco addiction
