International Handbook of Mathematics Education Alan Bishop, M.A. (Ken) Clements, Christine Keitel-Kreidt, Jeremy Kilpatrick, Colette Laborde, 2012-12-06 ALAN J BISHOP Monash University Clayton Victoria Australia RATIONALE Mathematics Education is becoming a well documented field with many books journals and international conferences focusing on a variety of aspects relating to theory research and practice That documentation also reflects the fact that the field has expanded enormously in the last twenty years At the 8th International Congress on Mathematics Education ICME in Seville Spain for example there were 26 specialist Working Groups and 26 specialist Topic Groups as well as a host of other group activities In 1950 the Commission Internationale pour l'Etude et l'Amelioration de l'Enseignement des Mathématiques CIEAEM was formed and twenty years ago another active group the International Group for the Psychology of Mathematics Education PME began at the third ICME at Karlsruhe in 1976 Since then several other specialist groups have been formed

and are also active through regular conferences and publications as documented in Edward Jacobsen's Chapter 34 in this volume **The Australian Mathematics Teacher**, 1993 **The Sociology of Mathematics Education** Paul Dowling, 2002-11-01 Until the 1960s maths was studied as an academic subject in a desire to have more mathematicians. The current trend however has moved away from viewing maths as a purely intellectual endeavour and towards developing a more mathematically competent workforce and citizenry. This trend has seen a large increase in the number of maths schemes being produced by the major educational publishers which attempt to make maths easier and more approachable by using language instead of symbols. So why do so many children still fail at maths? The author contends that to understand this teachers need to analyze and evaluate the maths textbooks they are currently using. The author shows the reader how to systematically analyze and evaluate these textbooks. This interrogation of classroom resources should have important implications for teaching strategies and for textbook design and use.

Doing Research/Reading Research Paul Dowling, 2005-11-29 This best selling text provides a scheme which enables the beginning researcher to organize and evaluate the research that they read and to plan and implement small scale research projects of their own. The authors also give structured practical guidance on the development of a research question, techniques of data collection, qualitative and quantitative forms of analysis and the writing and dissemination of research.

The present postconference book includes the best papers and invited talks presented during the three days of the conference held at the Faculty of Engineering of the University of Porto, Portugal, June

26 28 2002 The book is organized into 8 chapters which as a whole appeal to a wide research community from those involved in the engineering applications to those interested in the actual details of the hardware or software implementation in line with what in these days tends to be considered as Computational Science and Engineering CSE The book comprises a total of 49 papers with a prominent position reserved for the four invited talks and the two first prizes of the best student paper competition
