State of the World's Forests 2014 Food and Agriculture Organization (FAO), 2014 Across the world forests trees on farms and agroforestry systems play a crucial role in the livelihoods of rural people by providing employment energy nutritious foods and a wide range of other goods and ecosystem services They have tremendous potential to contribute to sustainable development and to a greener economy Yet clear evidence of this has been lacking This evidence is critical to inform policies on forest management and use and to ensure that the benefits from forests are recognized in the post 2015 development agenda not only with respect to the environment but also for their contributions to broader social issues This edition of FAO's State of the World's Forests report SOFO 2014 addresses this knowledge gap by systematically gathering and analyzing available data on forests contributions to people's livelihoods food health shelter and energy needs Crucially the report also suggests how information might be improved and policies adjusted so that the socioeconomic benefits from forests can be enhanced in the future

Africa Environment

Outlook 2 United Nations Environment Programme, 2006 This is the second comprehensive report on the state of Africa's

environment produced in collaboration with the African Ministerial Conference on the Environment AMCEN This report highlights the central position Africa's environment continues to play in sustainable development as well as its potential to achieve progress in the implementation of the Millennium Development Goals The report profiles Africa's environmental resources as an asset for the continent's development It highlights the opportunities presented by the region's natural resource base to support the continent's development It also underscores the concept of sustainable livelihoods and the importance of the environmental initiatives in supporting them

Global Forest Resources Assessment 2005 Food and Agriculture Organization of the United Nations, 2006 Since 1946 FAO regularly monitors the world's forests through Global Forest Resources Assessments The mandate to carry out these assessments stems both from the basic statutes of FAO and the Committee on Forestry COFO Divided into nine chapters the publication covers the following topics the extent of forest resources biological diversity forest health and vitality productive functions of forest resources protective functions of forest resources socio-economic functions progress towards sustainable forest management

Forests Sourcebook World Bank, 2008 In 2002 the World Bank adopted a strategy on forests that allows for more proactive engagement in the forest sector to attain the goal of reducing poverty without jeopardizing the environment

Logging for the Ark Lena Gustafsson, 2007 In order to maintain the high levels of biodiversity and the ecological functions of tropical forest landscapes in South East Asia production forests need to be managed in a more sustainable way Numerous initiatives already exist in the form of codes of practice criteria and indicators and certification schemes in the countries of South East Asia but to date such guidelines and standards have been vague and have lacked quantitative targets Reduced impact logging RIL is a concept related to techniques and practices that aim to achieve environmentally sound timber harvesting the concept has gained broad acceptance in the tropics As yet however RIL guidelines have focused mainly on environmental aspects such as soil and water and have taken the flora and fauna into account to a minor degree only In this report detailed recommendations are made to help forest managers take account of biodiversity conservation in dipterocarp logged over and primary natural forests where mechanized logging is practiced The recommendations are based on those made in the CIFOR publication *Life after Logging* further developed through three workshops held under a joint project between the Swedish University of

Agricultural Sciences CIFOR and the Forest Science Institute of Vietnam The recommendations are linked to the different phases of the forestry cycle i e planning inventories of sensitive species and habitats delimitation of set aside areas and riparian buffers infrastructure logging camps roads bridges skid trails landings logging retention of critical structures micro habitats key resources felling techniques harvesting intensity site adaption post logging understory slashing rehabilitation of log landings and stream crossings re forestation and monitoring biodiversity inventories Issues related to hunting fire invasive species domestic animals traffic and logging and conservation for local people are also covered *National Geographic Collegiate Atlas of the World* National Geographic Society (U.S.),2006 This compact easy to use atlas offers the convenience of smaller scale without sacrificing clarity or detail instead identically scaled maps on a given continent enable readers to compare physical political and regional information simply and accurately In addition access to a companion Web site provides continuing and complementary information *World Wood Industries Outlook, 2005-2030* James A. Turner,2006 **The Impact of Timber Harvesting on the Availability of Non-wood Forest Products in the Congo Basin** Julius Chupezi Tieguhong,2007 *Environmental Change and Biodiversity* Ram Babu Singh,Suraj Mal,2009 Unprecedented loss and changes in biodiversity are taking place at the genetic species and ecosystem levels in both terrestrial and marine groups of organisms One of the major concerns of biodiversity loss is the reduction in the capacity of natural and managed ecosystems to render quality ecological services such as production of food and fibre carbon storage nutrient cycling and resistance to climate and other environmental changes The extraction of biomass resources such as fuel wood fodder timber etc which was once within the carrying capacity of forests has now crossed this limit in most of the resource rich areas Presently habitat conversion and destruction are eliminating species at such a rapid pace that extinction of contemporary species is leading to imbalance of ecosystem The problem of biodiversity loss needs to be minimized in order to keep the ecosystem functional Therefore assessing the causes and consequences of biodiversity loss and environmental changes and establishing the bases for the conservation and sustainable use of biodiversity are major scientific challenges of our time It is against this backdrop the present study was carried out with multidisciplinary approach to answer the following questions What are the spatial patterns of environmental change and biodiversity loss and their driving forces across the world in general and the Himalayan state of Uttarakhand in particular What are the linkages between land use cover change landslides and biodiversity loss To what extent community participation can help for conservation of biodiversity The book will contribute to India s efforts in fulfilling the goals of the International Year of Planet Earth IYPE Kyoto Protocol and UN Framework Convention on Climate Change UNFCCC It will be useful for geographers environmentalists life scientists mountain experts and policy makers The Improving State of the World Indur M. Goklany,2007 Relying on a wealth of data Goklany shows how innovation increases in affluence and key institutions have combined to address environmental degradation that sometimes results from growth The evidence on the use of cropland trends in air pollution and diverse

experiences in water usage counters the gloomy outlook of some environmentalists Goklany explains why the state of the world is improving and offers a realistic assessment of the sustainability of the human enterprise setting priorities for dealing with such challenges as climate change *Annual Report and Accounts* Great Britain. Forestry Commission,1999

Adaptation of forests and people to climate change Risto Seppälä,2009 **New Zealand Journal of Forestry Science**
