The Making Of The Modern Architect And Engineer:

The Making of the Modern Architect and Engineer Ulrich Pfammatter, 2000 The very first school for architecture came into being when the Ecole Polytechnique opened its gates in Paris in 1794 and with this the profession of the architect as we understand it today was born Using previously unpublished texts and visual material Ulrich Pfammatter traces in fascinating detail the origins and subsequent development of the scientific and industrial training of architects and engineers He explores the growth of the architecture schools in Paris Karlsruhe Zürich London and the USA and by considering important exponents such as Durand Reynaud Mary Weinbrenner Semper Dufour Klenze Eiffel and Jenney he provides a detailed exposition of this important chapter in civil engineering and architectural history *Architects and Engineers* Roland May, 2022-10-24 In the first decades of the 20th century civil engineers were widely seen as a role model for future architects Their role within the contemporary architecture movements however was hardly discussed To this day even fundamental questions about collaborations rivalries or conflicts between the two sister disciplines still await answers This volume brings together contributions by international scholars on the cooperation between architects and civil engineers in various countries in the interwar period By offering both insights into national peculiarities and new reflections on the general nature character and significance of such joint efforts it opens exciting new perspectives on the modern building culture of Europe and beyond Innovative tools and design strategies. The case of Eclectic Architecture in Buenos Aires Garrido, Federico Andrés, 2023-05-26 The research deals with a question about Architecture and its design strategies combining historical information and digital tools Design strategies are historically defined they rely on geometry context building technologies and other factors The study of Architecture's own history particularly in the verge of technological advancements like the introduction of new materials or tools may shed some light on how to internalize digital tools like parametric design and digital fabrication **Detailing Worlds** Eric Bellin, 2025-02-06 In the 21st century the word detail appears constantly in discussions of building and we use it in many different ways yet just over 250 years ago detail meant nothing at all particular to the work of architects engineers or builders Detailing Worlds is the first book to examine the origins and evolution of detail as a concept with meanings specific to practices of building By exploring how past meanings and roles were ascribed to detail in different worlds of practice those of academics technicians students engineers and architects Detailing Worlds looks to the future illuminating the ways disciplinary knowledge and the concepts on which it is based evolve and change over time It is a story about how such concepts are slowly but constantly reconceived redefined and transformed by individuals as they interact with one another and how this process is shaped by the ever changing sociocultural and technological dimensions of the world around us Richly illustrated with more than 200 images including figures from rare texts archival student drawings and practitioners construction documents from the 18th through 20th centuries Detailing Worlds ventures to tell the history of a disciplinary specific idea and offer insights about how we think

and speak about the practice of building today *The Autopoiesis of Architecture, Volume II* Patrik Schumacher, 2012-04-24

This is the second part of a major theoretical work by Patrik Schumacher which outlines how the discipline of architecture should be understood as its own distinct system of communication Autopoiesis comes from the Greek and means literally self production it was first adopted in biology in the 1970s to describe the essential characteristics of life as a circular self organizing system and has since been transposed into a theory of social systems This new approach offers architecture an arsenal of general comparative concepts It allows architecture to be understood as a distinct discipline which can be analyzed in elaborate detail while at the same time offering insightful comparisons with other subject areas such as art science and political discourse On the basis of such comparisons the book insists on the necessity of disciplinary autonomy and argues for a sharp demarcation of design from both art and engineering Schumacher accordingly argues controversially that design as a discipline has its own sui generis intelligence with its own internal logic reach and limitations Whereas the first volume provides the theoretical groundwork for Schumacher's ideas focusing on architecture as an autopoietic system with its own theory history medium and its unique societal function the second volume addresses the specific contemporary challenges and tasks that architecture faces It formulates these tasks looking specifically at how architecture is seeking to organize and articulate the complexity of post fordist network society The volume explicitly addresses how current architecture can upgrade its design methodology in the face of an increasingly demanding task environment characterized by both complexity and novelty Architecture's specific role within contemporary society is explained and its relationship to politics is clarified Finally the new global style of Parametricism is introduced and theoretically grounded **Building Theories** Franca Trubiano, 2022-11-25

Building Theories speaks to the value of words in architecture It addresses the author's fascination with the voices of architects engineers builders and craftspeople whose ideas about building have been captured in text It discusses the content of treatises essays articles and letters by those who have been throughout history committed to the art of building In this **Building Theories** argues for the return of a practice of architectural theory that is set amongst building buildings and builders This journey of close reading reinterprets the words of Vitruvius Alberti de L Orme Le Camus de Mézières Boullée Laugier Rondelet Semper Viollet le Duc Hebsch Brechtier Berlage Muthesius Wagner Behrendt Gropius and Arup With chapters dedicated to texts from antiquity the Renaissance and the nineteenth century and with a critical eye on architectural theory popularized in the Anglo Saxon world post 1968 readers are introduced to a wider more inclusive definition of architectural ideas **Building Theories** considers how contemporary scholarship has steered away from the topic of building in its reluctance to admit that both design and construction are central to its concerns In response it argues for a realignment of architecture with the concept of *techné* with a dual commitment to *fabrica* e *ratio* with a productive return to *l'art de bien bâtir* with the accurate translation of the term *Baukunst* and with an appeal to the architect's composite mind Students practitioners and educators will identify in **Building Theories** ways of thinking that strive

for the integration of design with construction reject the supposed primacy of the former over the latter recognize how aesthetics are an insufficient scaffold for subtending the subject of architectural ethics and accept without reservation that material transformations have always been at the origins of built form

Assembling the Architect George Barnett Johnston, 2020-01-23 *Assembling the Architect* explores the origins and history of architectural practice It unravels the competing interests that historically have structured the field and cultivates a deeper understanding of the contemporary profession Focusing on the period 1870 to 1920 when the foundations were being laid for the U S architectural profession that we recognize today this study traces the formation and standardization of the fundamental relationships among architects owners and builders as codified in the American Institute of Architects very first Handbook of Architectural Practice It reveals how these archetypal roles have always been fluid each successfully redefining their own agency with respect to the others in the constantly shifting political economy of building Far from being a purely historical study the book also sheds light on today s digitally enabled profession Contemporary architectural tools and disciplinary ideals continue to be shaped by the same fundamental tensions and emergent modes of practice such as BIM Building Information Modelling and IPD Integrated Project Delivery represent the realization of programs and agendas that have been over a century in play Essential reading for professional practice courses as a contextual and historical companion to the Handbook *Assembling the Architect* provides a critical perspective of the profession that is fundamental to understanding current architectural practice
