Making Industrial Pittsburgh Modern Edward K. Muller,Joel A. Tarr,2019-10-22 Pittsburgh s explosive industrial and population growth between the mid nineteenth century and the Great Depression required constant attention to city building Private profit oriented firms often with government involvement provided necessary transportation energy resources and suitable industrial and residential sites Meeting these requirements in the region s challenging hilly topographical and riverine environment resulted in the dramatic reshaping of the natural landscape At the same time the Pittsburgh region s free market private enterprise emphasis created socio

economic imbalances and badly polluted the air water and land Industrial stagnation temporarily interrupted by wars and then followed deindustrialization inspired the formation of powerful public private partnerships to address the region's mounting infrastructural economic and social problems The sixteen essays in *Making Industrial Pittsburgh Modern* examine important aspects of the modernizing efforts to make Pittsburgh and Southwestern Pennsylvania a successful metropolitan region The city building experiences continue to influence the region's economic transformation spatial structure and life experience

The Early History of Railway Tunnels Hubert Pragnell, 2024-08-30 To the early railway traveller the prospect of travelling to places in hours rather than days hitherto was an inviting prospect however a journey was not without its fears as well as excitement To some the prospect of travelling through a tunnel without carriage lighting with smoke permeating the compartment and the confined noise was a horror of the new age What might happen if we broke down or crashed into another train in the darkness To others it was exciting with the light from the footplate flickering against the tunnel walls or spotting the occasional glimpses of light from a ventilation shaft To the directors of early railway companies planning a route was governed by expense and the most direct way Avoiding hills could add miles but tunnelling through them could involve vast expense as the Great Western Railway found at Box and the London and Birmingham at Kilsby Creating a cutting as an alternative was also costly not only in labour and time but also in compensation for landowners who opposed railways on visual and social grounds having seen their land divided by canals Construction involved millions of bricks or blocks of stone for sufficiently thick walls to withstand collapse However the entrance barely seen from the carriage window might be an impressive Italianate arch as at Primrose Hill or a castellated portal worthy of the Middle Ages as at Bramhope This book sets out to tell the story of tunnelling in Britain up to about 1870 when it was a question of burrowing through earth and rock with spade and explosive powder with the constant danger of collapse or flooding leading to injury and death It uses contemporary accounts from the dangers of railway travel by Dickens to the excitement of being drawn through the Liverpool Wapping Tunnel by the young composer Mendelssohn It includes descriptions from early railway company guide books newspapers and diaries It also includes numerous photographs and colored architectural elevations from railway archives

Locating the Industrial Revolution Eric L. Jones, 2010 The familiar industrialisation of northern England and less familiar de industrialisation of the south are shown to have depended on a common process Neither rise nor decline resulted from differences in natural resource endowments since they began before the use of coal and steam in manufacturing Instead political certainty competitive ideology and Enlightenment optimism encouraged investment in transport and communications This integrated the national market intensifying competition between regions and altering economic distributions Despite a dysfunctional landed system agricultural innovation meant that the south's comparative advantage shifted towards the farm sector Meanwhile its manufactures slowly declined Once industry clustered in the less benign northern environment technological changes in manufacturing accumulated there This book portrays the Industrial Revolution as deriving from economic competition within unique political arrangements
