The Sixth Canadian Conference on General Relativity and Relativistic Astrophysics Stephen Paul Braham, Jack David Gegenberg, Robert James McKellar, 1997 This volume is the refereed proceedings of the Sixth Canadian Conference on General Relativity and Relativistic Astrophysics held in May 1995 at the University of New Brunswick The book includes invited talks and contributed talks and posters including state of the art reviews of many of the most recent important developments in gravitational physics This book would serve as a good supplement to standard texts on the topic It features review articles in key areas black holes numerical relativity etc contributions covering most of gravitational physics useful articles for students who wish to begin exploring the issues discussed and invited talks given by researchers known for their ability to communicate their expertise

The Sixth Canadian Conference on General Relativity and Relativistic Astrophysics Canadian Conference on General Relativity and Relativistic Astrophysics, 2012 *General Relativity And Relativistic Astrophysics - Proceedings Of The 5th Canadian Conference* Robert B Mann, Raymond G McLenaghan, 1994-08-31 This volume contains up to date accounts of many of the latest developments in gravitation cosmology and astrophysics including papers on black hole radiation empirical tests of gravitational theory quantum gravity classical and quantum cosmology singularities computational methods and a number of other topics The keynote speakers include S Carlip M Haugan A Linde D Page G Papini K Schleich P Szekeres G Starkman and J York

The Arnoldfest Vladimir Igorevich Arnol'd, 1999 This volume presents articles originating from invited talks at an exciting international conference held at The Fields Institute in Toronto celebrating the sixtieth birthday of the renowned mathematician Vladimir Arnold Experts from the world over including several from Arnold's school gave illuminating talks and lively poster sessions The presentations focused on Arnold's main areas of interest singularity theory the theory of curves symmetry groups dynamical systems mechanics and related areas of mathematics The book begins with notes of three lectures by V Arnold given in the framework of the Institute's Distinguished Lecturer program The topics of the lectures are 1 From Hilbert's Superposition Problem to Dynamical Systems 2 Symplectization Complexification and Mathematical Trinities 3 Topological Problems in Wave Propagation Theory and Topological Economy Principle in Algebraic Geometry Arnold's three articles include insightful comments on Russian and Western mathematics and science Complementing the first is Jurgen Moser's Recollections concerning some of the history of KAM theory

High Primes and Misdemeanours Hugh C. Williams, A. J. Van Der Poorten, Andreas Stein, This volume consists of a selection of papers based on presentations made at the international conference on number theory held in honor of Hugh Williams sixtieth birthday The papers address topics in the areas of computational and explicit number theory and its applications The material is suitable for graduate students and researchers interested in number theory

Stable and Unstable Homotopy William G. Dwyer, 1998-01-01 This volume presents the proceedings of workshops on stable homotopy theory and on unstable homotopy theory held at The Fields Institute as part of

the homotopy program during the year 1996 The papers in the volume describe current research in the subject and all included works were refereed Rather than being a summary of work to be published elsewhere each paper is the unique source for the new material it contains The book contains current research from international experts in the subject area and presents open problems with directions for future research

Principles Of Space-time-matter: Cosmology, Particles And Waves In Five Dimensions Paul S Wesson,James M Overduin,2018-12-13 For those interested the book is a good and well written overview of the work of Wesson and his collaborators For those with a general interest in extensions of standard physics accessibility is strongly dependent on the reader s technical background though the good structure of the book and copious references including many to work by more mainstream physicists on related topics make that possible for those willing to invest some time The Observatory MagazineThis book is a summing up of the prospects for unification between relativity and particle physics based on the extension of Einstein s theory of General Relativity to five dimensions This subject was first established by Paul Wesson in his previous best seller Space Time Matter and discussed from a different perspective in Five Dimensional Physics both published by World Scientific in 1999 and 2006 respectively This third book brings the field up to date and details many new developments and connections to particle theory and wave mechanics in particular It was in largely finished form at the time of Paul Wesson s untimely death in 2015 and has been completed and expanded by his former student and longtime collaborator James Overduin
