The Relationship Between Farm Size and Efficiency in South African Agriculture Colin Thirtle, 1999 November 1995 Commercial farms in South Africa could become significantly more efficient if they became smaller The government could encourage that trend by removing policies and distortions that favor large over small farms Drawing on international evidence van Zyl Binswanger and Thirtle discuss the sources of economies of scale Using representative farm level survey data for South Africa's six major grain producing areas and one irrigation area for the period 1975-90 they Describe the structure of South African agriculture detailing the distribution of farm sizes and results from previous studies of farm size efficiency Analyze the evidence on scale efficiency in the former homelands Analyze the relationship between farm size and efficiency in commercial farming and discuss how policy affects that relationship Clearly policy has a crucial impact on the relationship between farm size and efficiency They find that Farms in the former homelands seem to be scale inefficient which is unsurprising given the historical lack of access to support services and infrastructure policies that discriminate against farmers in the homelands and the extremely fragmented and limited land use rights of farmers there There is an inverse relationship between farm size and efficiency in the commercial farming areas for the range of farms analyzed regardless what method is used This inverse relationship seems to become stronger and more accentuated as policy distortions which tend to favor large farms over small ones are removed Large farms tend to use more capital intensive methods of production while smaller farms are more labor intensive And managerial ability seems to be better on larger farms There is an inverse relationship between farm size and efficiency in South African agriculture despite South Africa's history of policies favoring relatively large mechanized farms Clearly efficiency gains could be significant if commercial farms became smaller To encourage that trend policies and distortions that favor large farms over small should be removed This

Towards Sustainable Development Goal of Zero Hunger: Exploring the Dynamic Relationships between Food Pricing, Agriculture, and Food Security Noshaba Aziz,Wioletta Żukiewicz-Sobczak ,Ruishi Si,2025-10-16 United Nations Sustainable Development Goal SDG 2 aspires to eradicate hunger by 2030 emphasizing the intricate relationships between agriculture food security and nutrition However this noble pursuit faces formidable challenges in emerging countries due to a confluence of international disruptions Climate change the COVID 19 pandemic and geopolitical conflicts like the war in Ukraine have triggered sharp spikes in commodity prices amplifying food security concerns particularly in developing nations The Food and Agriculture Organization of the United Nations recently reported the highest global food price increase since the 1990s in March This commodity price inflation in turn reverberates across agriculture impacting not only a nation s economy but also its food production capacity Elevated commodity prices drive up the costs of agricultural inputs such as fertilizers pesticides and fuel compelling farmers to pass these expenses on to consumers in the form of higher food prices Moreover country specific economic factors within the agricultural sector including land ownership technology adoption farming practices and infrastructure further complicate the food security landscape Therefore the intricate interplay between

commodity price inflation agriculture and food security is significantly influenced by a nation's unique economic dynamics within its agricultural sector. Effectively addressing these challenges necessitates a blend of international and domestic policy measures to ensure that the benefits of agricultural progress reach the broader population.
