## Maps

A map is a two-dimensional drawing of an area as it would look if viewed from above. Significant features and boundaries are represented by symbols. There are maps for almost every place on earth. Maps of the world, individual countries, and your home town provide an abundance of information.

## Globes

Globes give the most possible view of the earth. They are mounted on a center axis and spin freely to show how the earth rotates. Globes are tilted on their axis to accurately represent the angle at which the earth rotates.

### Legend

The legend is the key to much of the information on a map. It is usually located in the lower-left corner of the map. The legend tells what the map's symbols stand for. It usually shows the lines used for coastlines, boundaries, and the colors that represent different kinds of land and geographic features. It also shows the symbols for cities, towns, and bodies of water. To find out what a symbol stands for, look carefully at the legend.

#### Legend

- International boundary
- State boundary
- National capital
- Major city
- Major highway
- Ocean route
- Railroad
- Canal
- River
- Mountain peak

### Lines of Latitude

Lines of latitude, or parallels, run from east to west and indicate distances north and south of the equator. The equator is an imaginary line divided into two equal parts around the middle of the earth. It is located at 0° latitude and divides the earth into the northern hemisphere and the southern hemisphere.

### Lines of Longitude

Lines of longitude, or meridians, run north and south from pole to pole. They indicate distances east and west of the prime meridian. The prime meridian is an imaginary line running from pole to pole that divides the earth into the eastern hemisphere and the western hemisphere. It is located at 0° longitude and is the starting point for measuring longitude.

### Map Scale

A map scale is used to measure distances between points. The scale is used to measure distances on the map and actual distances in the real world. The scale shows the relationship between the distance on the map and the actual distance in the real world.

### Compass Rose

This symbol shows the four cardinal directions and, in some cases, the four intermediate directions.

### Political Map

A political map shows national cities and the boundaries that divide one nation from another. Some political boundaries follow rivers, mountains, or coastlines. Others are straight lines on a map but invisible in the real world. Peoples eat and change political boundaries.

### Physical Map

A physical map shows the earth's features of water and landforms. It uses brown, green, and different colors to show elevation and distinguish highlands, lowlands, and plains from mountains and valleys. Elevations are measured from sea level, the height of the ocean where it meets the land.

**Maps and Globes** Kenneth A. Job, Lois Weiser Wolf, 1976  
Publishing Company, 1976  
Having Fun with Maps and Globes Abraham Resnick, 2000-05-26  
The primary purpose of his handbook is to provide educators with a variety of proven activities to make learning map and globe skills both enjoyable and meaningful for your students. The activities which include cross curriculum can be used with multiple grade levels, small groups or individually. Having Fun with Maps and Globes is organized into six parts. Part One introduces you to the basic goals of a Map and Globe Skills Program and concludes with some general Tips for Teachers. Part Two provides activities for teaching the basic concepts of maps and globes. Because the ability to read and make maps involves many individual skills, the activities in this section are organized into several categories or subsets of skills. For each subset, several fully developed activities are presented along with a grab bag of additional activities that can be used in a stand alone map and globe unit or to reinforce general map skills. Because map and globe skills support other curriculum areas besides social studies, Part Three provides activities organized by subject area. This allows you to locate the subject you are teaching and access several related map and globe skill activities. Such cross curriculum tasks will reinforce art, math, reading, science, language, and thinking skills. For easy access, all student activity sheets called Supplements in this manual are located in Part Four of the handbook. Part Five lists currently available resources for teachers and students. Beyond the standard lists of print materials, the author has provided sources for multimedia kits and computer software that will enrich anyone's program. An appendix which includes map masters, a glossary of terms, and comparison charts concludes the handbook. Although these materials are mentioned in various activities throughout the book, here they are more accessible as a reference and as a source from which to draw in developing your own lessons or an entire school program. Because of the wide range of resources, Having Fun with Maps and Globes provides this handbook as a wonderful companion to the supplementary materials you presently use in your school curriculum.
