VanderMeer, 2010-12-16 Whether touted for its burgeoning economy affordable housing and pleasant living style or criticized for being less like a city than a sprawling suburb Phoenix by all environmental logic should not exist Yet despite its extremely hot and dry climate and its remoteness Phoenix has grown into a massive metropolitan area This exhaustive study examines the history of how Phoenix came into being and how it has sustained itself from its origins in the 1860s to its present status as the nation's fifth largest city From the beginning Phoenix sought to grow and although growth has remained central to the city's history its importance meaning and value have changed substantially over the years The initial vision of Phoenix as an American Eden gave way to the Cold War Era vision of a High Tech Suburbia which in turn gave way to rising concerns in the late twentieth century about the environmental social and political costs of growth To understand how such unusual growth occurred in such an improbable location Philip VanderMeer explores five major themes the natural environment urban infrastructure economic development social and cultural values and public leadership Through investigating Phoenix's struggle to become a major American metropolis his study also offers a unique view of what it means to be a desert city

Reconsidering a Century of Flight Roger D. Launius, Janet R. Daly Bednarek, 2015-12-01 On December 17 1903 Orville and Wilbur Wright soared into history during a twelve second flight on a secluded North Carolina beach Commemorating the 100th anniversary of the first flight these essays chart the central role that aviation played in twentieth century history and capture the spirit of innovation and adventure that has characterized the history of flight The contributors all leading aerospace historians consider four broad themes relating to the development of flight technology innovation and the technology of flight civil aeronautics and government policy aerial warfare and aviation in the American imagination Through their attention to the political economic military and cultural history of flight the authors establish that the Wrights invention and all that followed in both air and space was one of the most significant technologies of the twentieth century fundamentally reshaping our world Supported by the First Flight Centennial Commission The contributors are Janet R Daly Bednarek Tami Davis Biddle Roger E Bilstein Hans Joachim Braun David T Courtwright Anne Collins Goodyear Roger D Launius William M Leary David D Lee W David Lewis John H Morrow Dominick A Pisano and A Timothy Warnock

Bradford Luckingham, 1995-08-01 More than half of all Arizonans live in Phoenix the center of one of the most urbanized states in the nation This history of the Sunbelt metropolis traces its growth from its founding in 1867 to its present status as one of the ten largest cities in the United States Drawing on a wide variety of archival materials oral accounts promotional literature and urban historical studies Bradford Luckingham presents an urban biography of a thriving city that for more than a century has been an oasis of civilization in the desert Southwest First homesteaded by pioneers bent on seeing a new agricultural empire rise phoenix like from ancient Hohokam Indian irrigation ditches and farming settlements Phoenix became an agricultural oasis in the desert during the late 1800s With the coming of the railroads and the transfer of the territorial capital to Phoenix local boosters were already proclaiming it the new commercial center of Arizona As the city also came to be recognized as a health and tourist mecca thanks to its favorable climate the concept of the good life became the centerpiece of the city's promotional efforts Luckingham follows these trends through rapid expansion the Depression and the postwar boom years and shows how economic growth and quality of life have come into conflict in recent times

Dreams of Flight Janet Rose Daly Bednarek, Michael H. Bednarek, 2003 General aviation encompasses all the ways aircraft are used beyond commercial and military flying private flights barnstormers cropdusters and so on Authors Janet and Michael Bednarek have taken on the formidable task of discussing the hundred year history of this broad and diverse field by focusing on the most important figures and organizations in general aviation and the major producers of general aviation aircraft and engines This history examines the many airplanes used in general aviation from early Wright and Curtiss aircraft to the Piper Cub and the Lear Jet The authors trace the careers of birdmen birdwomen barnstormers and others who shaped general aviation from Clyde Cessna and the Stinson family of San Antonio to Olive Ann Beech and Paul Poberezny of Milwaukee They explain how the development of engines influenced the development of aircraft from the E 107 that powered the 1929 Aeronca C 2 the first affordable personal aircraft to the Continental A 40 that powered the Piper Cub and the Pratt and Whitney PT 6 turboprop used on many aircraft after World War II In addition the authors chart the boom and bust cycle of general aviation manufacturers the rising costs and increased regulations that have accompanied a decline in pilots the
