**The Impact of the Computer on Society** ,1966      Personal Computers and the Family Marvin B. Sussman,1985 A pioneering volume that explores the new phenomenon of the personal computer and its impact on the family Family theorists express queries and concerns about the significance of the personal computer upon the organization values ideologies and behavioral practices of family systems The rich selection of ideas discussed in this groundbreaking book include the impact of computers on family dynamics and development the family s response to this new technology the potential benefits or harm to marital parent child relationships and quality of family life the use of microcomputers in family therapeutic processes and the role of personal computers in the delivery of services to families      **NBS Special Publication** ,1968      The Impact of the Computer Andrew J. Grimes,Roger C. Vergin,1963      **Monthly Labor Review** ,1960 Publishes in depth articles on labor subjects current labor statistics information about current labor contracts and book reviews      **The Biology of Computer Life** SIMONS,2012-12-06 The doctrine of computer life is not congenial to many people Often they have not thought in any depth about the idea and it necessarily disturbs their psychological and intellectual frame of reference it forces a reappraisal of what it is to be alive what it is to be human and whether there are profound yet un expected implications in the

development of modern computers There is abundant evidence to suggest that we are witnessing the emergence of a vast new family of life forms on earth organisms that are not based on the familiar metabolic chemistries yet whose manifest life credentials are accumulating year by year It is a mistake to regard biology as a closed science with arbitrarily limited categories and we should agree with Jacob 1974 who observed that Contrary to what is imagined biology is not a unified science Biology is essentially concerned with living things and we should be reluctant to assume that at any one time our concept and understanding of life are complete and incapable of further refinement And it seems clear that much of the continuing refinement of biological categories will be stimulated by advances in systems theory and in particular by those advances that relate to the rapidly expanding world of computing and robotics We should also remember what Pant in 1968 said in a different context the biological sciences are unrestricted and their investigator must be prepared to follow their problems into any other science whatsoever **Bulletin of the United States Bureau of Labor Statistics** ,1960
