THE DARK SIDE OF GOD'S LIGHT
LAKHEM RA-SEBEK,2013-12-26 This work is an introspective approach to major religious texts We are compelled to see things in the way that they have been prepared for us to see though for convenience we suffer the burden of ignorance Beyond the conventionally accepted methods of religious study there is a vast wealth of information waiting for those willing to inconvenience themselves out of the grasp of ignorance The true master does not cling to systems or set ceremonial practices they simply see systems and practices as bridges that lead to higher ground The master is not even attached to his own ideas In fact at the level of mastery there is no attachment there is only investment Investment in those actions that make sense and bring about results the present is the masters arena

Research Collaboration and Team Science Barry Bozeman,Craig Boardman,2014-05-16 Today in most scientific and technical fields more than 90% of research studies and publications are collaborative often resulting in high impact research and development of commercial applications as reflected in patents Nowadays in many areas of science collaboration is not a preference but literally a work prerequisite The purpose of this book is to review and critique the burgeoning scholarship on research collaboration The authors seek to identify gaps in theory and research and identify the ways in which existing research can be used to improve public policy for collaboration and to improve project level management of collaborations using Scientific and Technical Human Capital STHC theory as a framework Broadly speaking STHC is the sum of scientific and technical and social knowledge skills and resources embodied in a particular individual It is both human capital endowments such as formal education and training and social relations and network ties that bind scientists and the users of science together STHC includes the human capital which is the unique set of resources the individual brings to his or her own work and to collaborative efforts Generally human capital models have developed separately from social capital models but in the practice of science and the career growth of scientists the two are not easily disentangled Using a multi factor model the book explores various factors affecting collaboration outcomes with particular attention on institutional factors such as industry university relations and the rise of large scale university research centers
