Beyond Sputnik and the Space Race Hugh R. Slotten, 2022-02-08 A fascinating account of how the United States established the first global satellite communications system to project geopolitical leadership during the Cold War On July 20 1969 the world watched spellbound as NASA astronaut Neil Armstrong stepped off the Apollo 11 lunar module to walk on the moon NASA estimated that 20 percent of the planet's population nearly 650 million people watched the moon landing footage which was made possible by the first global satellite communications system the International Telecommunications Satellite Organization or Intelsat In *Beyond Sputnik and the Space Race* Hugh R Slotten analyzes the efforts of US officials especially during the Kennedy administration to establish this satellite communication system and open it to all countries of the world Locked in competition with the Soviet Union for both military superiority and international prestige President John F Kennedy overturned the Eisenhower administration's policy of treating satellite communications as simply an extension of traditionally regulated telecommunications Instead of allowing private communications companies to set up separate systems that would likely primarily serve major developed regions the new administration decided to take the lead in establishing a single world system Explaining how the East West Cold War conflict became increasingly influenced by North South tensions during this period Slotten highlights the growing importance of non aligned countries in Asia Latin America and Africa He also underscores the importance of a political economy of total Cold War in which many crucial aspects of US society became tied to imperatives of national security and geopolitical prestige Drawing on detailed archival records to examine the full range of decisionmakers involved in the Intelsat system *Beyond Sputnik and the Space Race* spotlights mid and lower level agency staff usually ignored by historians One of the few works to analyze the establishment of a major global infrastructure project this book provides an outstanding analytical overview of the history of global electronic communications from the mid nineteenth century to the present
