The Disadvantages of Logistic Regression

Logistic regression

also called logit regression or logit modeling, is a statistical technique allowing researchers to create predictive models. The technique is most useful for understanding the influence of several independent variables on a single dichotomous outcome variable. For example, logistic regression would allow a researcher to evaluate the influence of grade point average, test scores and curriculum difficulty on the outcome variable of admission to a particular university. The technique is useful, but it has significant limitations.

Identifying Independent Variables

Logistic regression attempts to predict outcomes based on a set
