The Australopithecine Face Yoel Rak, 2014-05-10 The Australopithecine Face provides an introduction to the interpretation of the facial skeleton of Australopithecus a part of the anatomy well represented in the African collections This book presents important morphological differences between the early hominid taxa and interprets them in a biochemical functional evolutionary framework Organized into seven chapters this book begins with an overview of the description of the face of the four species of Australopithecus extending to comparisons both within the genus and with other primates This text then provides an analysis of the facial morphology of Australopithecus in terms of structural significance Other chapters consider the taxonomic and phylogenetic status of the australopithecine species in light of the description and comparison This book discusses as well the changes in the morphology and topography of the facial mask The final chapter deals with the phylogenetic assignment of the different species This book is a valuable resource for anthropologists **"The"**

The Morphology and Architecture of the Australopithecine Face Yoel

Rak, 1981 *Evolutionary History of the Robust Australopithecines* Frederick E. Grine, 2017-09-29 In paleoanthropology the group of hominids known as the robust australopithecines has emerged as one of the most interesting Through them we have the opportunity to examine the origin natural history and ultimate extinction of not just a single species but of an entire branch in the hominid fossil record It is generally agreed that the human lineage can be traced back to this group of comparatively small brained large toothed creatures This volume focuses on the evolutionary history of these early hominids with state of the art contributions by leading international authorities in the field Although a case can be made for a robust lineage the functional and taxonomic implications of the morphological features are subject to vigorous disagreement An area of lively debate is the possible causal relationship between the presence of early Homo and the origin evolution and virtual extinction of robust australopithecines This volume summarizes what has been learned about the evolutionary history of the robust australopithecines in the 50 years since Robert Broom first encountered the visage of a new kind of ape man from Kromdraai New discoveries from Kromdraai to Lomekwi have served to keep us aware that the paleontological record for hominid evolution is hardly exhausted Because of such finds no single volume can hope to stand as a summary on the robust australopithecines for very long but this classic volume comes close to achieving this goal The book sheds new light upon some old questions and also acts to provide new questions The answers to those questions bring us closer to a fuller understanding and appreciation of the origins evolution and ultimate demise of the robust australopithecines Since the robust australopithecines most likely stand as our closest relatives a better understanding of their origin history and demise serves to provide heightened appreciation of the course of human evolution itself This definitive volume addresses the questions and problems surrounding this important lineage The Father of Man Conrad B. Quintyn, 2007-04-09 Making Faces Adam S. Wilkins, 2017-01-02 Adam Wilkins draws on studies of nonhuman species the fossil record genetics and

molecular and developmental biology to reconstruct the evolution of the human face and its inextricable link to our species evolving social complexity The neural and muscular mechanisms that allowed facial expressions also led to speech which is unique to humans [Current Catalog](#) National Library of Medicine (U.S.), *National Library of Medicine Current Catalog* National Library of Medicine (U.S.),1985 [Cenozoic Mammals of Africa](#) Lars Werdelin,William Joseph Sanders,2010-07-20 This impressively comprehensive volume is a long awaited and worthy successor to the now outdated 1978 classic *Evolution of African Mammals* A must have reference work for everyone interested in mammalian evolution David Pilbeam Harvard University and the Peabody Museum of Archaeology and Ethnology **Patterns of Growth and Development in the Genus Homo** J. L. Thompson,G. E. Krovitz,A. J. Nelson,2003-12-04 It is generally accepted that the earliest human ancestors grew more like apes than like humans today If they did so and we are now different when how and why did our modern growth patterns evolve This book focuses on species within the genus *Homo* to investigate the evolutionary origins of characteristic human patterns and rates of craniofacial and postcranial growth and development and to explore unique ontogenetic patterns within each fossil species Experts examine growth patterns found within available Plio Pleistocene hominid samples and analyse variation in ontogenetic patterns and rates of development in recent modern humans in order to provide a comparative context for fossil hominid studies Presenting studies of some of the newer juvenile fossil specimens and information on *Homo antecessor* this book will provide a rich data source with which anthropologists and evolutionary biologists can address the questions posed above
