Hawaii is a chain of islands that formed in the Pacific Ocean due to volcanic activity. The Pacific plate moves very slowly over a hot spot in Earth's mantle. This caused a string of islands known as an archipelago to form. Over the course of many centuries, one island would form over the hot spot but the plate would move, allowing a new island to form. Older islands have been worn away and sink back into the ocean in time. The engaging text addresses geological forces of the area as well as how people have discovered its many geological secrets. Maps, colorful photographs, and primary sources help readers make the most of their reading experience.

[The Hawaiian Archipelago](#) Isabella Lucy Bird, 1997. Isabella Bird visited the Sandwich Islands in 1871 when she was forty. Her letters home to her sister Henrietta have a remarkable freshness and spontaneity and reveal the transformation of a Victorian invalid into a fearless horsewoman and enthusiastic mountain climber who thought nothing of riding for miles soaked with rain and fording terrifyingly swollen rivers. She undertook a thirteen-hour unaccompanied trek to the summit of the extinct volcano of Mauna Kea, revelling in the security with which she was able to travel and camp out without guides or companions. At the end of her stay, she was able to make the perilous ascent to the summit of Mauna Loa, the largest volcano in the world, camping for the night on the edge of the crater at nearly 14,000 feet.
