

The Medieval Machine

Michael Adas

The Medieval Machine:

The Medieval Machine Jean Gimpel, 1977 The Middle Ages saw the first the true Industrial Revolution a change much more far reaching than the popularly accepted turning point of the 19th century Surveying technology and invention medieval scholar and social historian Jean Gimpel shows how energy resources manpower and sheer ingenuity revolutionized medieval agriculture industry construction and mining and he argues that the eventual economic and social decline that began in 14th century Europe parallels the feelings of modern industrial society especially as seen in the United States today

The Medieval Machine Jean Gimpel, 1981 *The medieval machine (La révolution industrielle du Moyen Age, engl.)* The industrial revolution of the Middle Ages Jean Gimpel, 1976 *Sublime Dreams of Living Machines* Minsoo Kang, 2011-02-28 Historian Minsoo Kang argues that to properly understand the human as machine and the human as fundamentally different from machine we must trace the origins of these ideas and examine how they were transformed by intellectual cultural and artistic appearances of the automaton throughout the history of the West Kang tracks the first appearance of the automaton in ancient myths through the medieval and Renaissance periods marks the proliferation of the automaton as a central intellectual concept in the Scientific Revolution and the subsequent backlash during the Enlightenment and details appearances in Romantic literature and the introduction of the living machine in the Industrial Age He concludes with a reflection on the destructive confrontation between humanity and machinery in the modern era and the reverberations of the humanity machinery theme today Machines as the Measure of Men Michael Adas, 2015-06-04 Over the past five centuries advances in Western understanding of and control over the material world have strongly influenced European responses to non Western peoples and cultures In Machines as the Measure of Men Michael Adas explores the ways in which European perceptions of their scientific and technological superiority shaped their interactions with people overseas Adopting a broad comparative perspective he analyzes European responses to the cultures of sub Saharan Africa India and China cultures that they judged to represent lower levels of material mastery and social organization Beginning with the early decades of overseas expansion in the sixteenth century Adas traces the impact of scientific and technological advances on European attitudes toward Asians and Africans and on their policies for dealing with colonized societies He concentrates on British and French thinking in the nineteenth century when he maintains scientific and technological measures of human worth played a critical role in shaping arguments for the notion of racial supremacy and the civilizing mission ideology which were used to justify Europe s domination of the globe Finally he examines the reasons why many Europeans grew dissatisfied with and even rejected this gauge of human worth after World War I and explains why it has remained important to Americans Showing how the scientific and industrial revolutions contributed to the development of European imperialist ideologies Machines as the Measure of Men highlights the cultural factors that have nurtured disdain for non Western accomplishments and value systems It also indicates how these attitudes in shaping policies that restricted the diffusion of scientific knowledge

have perpetuated themselves and contributed significantly to chronic underdevelopment throughout the developing world. As far reaching and provocative book will be compelling reading for all who are concerned about the history of Western imperialism and its legacies. First published to wide acclaim in 1989, *Machines as the Measure of Men* is now available in a new edition that features a preface by the author that discusses how subsequent developments in gender and race studies as well as global technology and politics enter into conversation with his original arguments. **In the Shadow of the**

Machine Jeremy Naydler, 2018-05-29 Contemporary life is so deeply reliant upon digital technology that the computer has come to dominate almost every aspect of our culture. What is the philosophical and spiritual significance of this dependence on electronic technology both for our relationship to nature and for the future of humanity? And what processes in human perception and awareness have produced the situation we find ourselves in? As Jeremy Naydler elucidates in this penetrating study, we cannot understand the emergence of the computer without seeing it within the wider context of the evolution of human consciousness which has taken place over millennia. Modern consciousness, he shows, has evolved in conjunction with the development of machines and under their intensifying shadow. The computer was the product of a long historical development culminating in the scientific revolution of the 17th century. It was during this period that the first mechanical calculators were invented and the project to create more complex thinking machines began in earnest. But the seeds were sown many hundreds of years earlier, deep in antiquity. Naydler paints a vast panorama depicting human development and the emergence of electronic technology. His painstaking research illuminates an urgent question that concerns every living person today: What does it mean to be human and what, if anything, distinguishes us from machines. **The Thinking**

Machine Charles Judson Herrick, 1929 This is a book about the natural history of human nature. It is not a book about philosophy for philosophers. It is a plain and straightforward statement for ordinary people of what another very ordinary sort of man, who has considerable experience with the mechanisms of human life and how they work, thinks about it all. We all want to understand human nature better because it is our nature. The better we understand it, the more likely we are to get along with ourselves, our neighbors, and our surroundings in general. We want to make life more worth while, to get as much out of it as we can, and to put as much into it as we can, to make a better living and to have as much fun doing it as possible. We need to know how we live, what the apparatus of life is, and how it works in order to make a better job of it. Preface

The Machines of Leonardo Da Vinci and Franz Reuleaux Francis C. Moon, 2007-10-29 This fascinating book will be of as much interest to engineers as to art historians, examining as it does the evolution of machine design methodology from the Renaissance to the Age of Machines in the 19th century. It provides detailed analysis comparing design concepts of engineers of the 15th century Renaissance and the 19th century age of machines, from a workshop tradition to the rational scientific discipline used today. *Species and Machines* Martyn Hudson, 2017-09-18 This book offers a re-examination of the relationship between humans and nature with a new methodology by examining our entanglement with machines. Using

central ideas of critical theory it uncovers the suppression of nature through technology tools and engines It focuses on the ways in which human social forms have actively subjugated and destroyed other species in order to enhance their own social power and accumulation leading to a new Anthropocene epoch in which human intervention is signalled in the geological record Beginning with an account of the interactions between humans and other species the book moves on to explore the hidden history of Marx and his obsession with machines as well as new attempts to rethink a Marxist ecology before proceeding to examine the manner in which technologies were used to suppress and destroy one particular species the Whale of what we call the Cetacean Holocaust Following this there are analyses of the emergence of the human encampments of the cities and the rise of mobile locomotive cultures and consideration of the relationship between machines of memory and the capturing of nature A radical rethinking of classical social theory that develops new ways of thinking about ecological catastrophe and nature this book will appeal to scholars of social theory and environmental sociology

Marcel Mazoyer, Laurence Roudart, 2006-01-01 This text provides an analysis of the rise of agriculture its handmaid civilization itself From the Near East Egypt to China the Americas medieval modern Europe it traces the rise of agriculture examines the tapestry of the social economic structures it nurtured attempts to show how this wealth is endangered
