

A wooden signpost stands in a garden. The signpost is made of light-colored wood and has a rectangular sign attached to it. The sign is made of a lighter, textured material, possibly paper or thin wood, and is held in place by four small metal screws. The sign contains text about foxes. The background shows a garden with various plants, including green leaves and some yellow flowers. A white picket fence is visible in the foreground, partially obscured by the signpost. The overall scene is bright and sunny.

The mice and other small animals  
foxes hunt don't see them because  
their red fur blends in with leaves  
and bushes. Foxes are very fast,  
too. They can run 31 miles per hour  
(50 kilometers per hour)—half as  
fast as a car on the highway.

voiceover we now begin a whole new area of circuit analysis called sinusoidal steady state analysis you can also call it ac analysis ac stands for alternating current it means it is a voltage or a current that where the signal actually changes sign it is positive sometimes it is negative sometimes

about transcript the ratio of a sinusoidal voltage to a sinusoidal current is called impedance this is a generalization of ohm's law for resistors we derive the impedance of a resistor inductor and capacitor the inductor and capacitor impedance includes a term for frequency so the impedance of these components depends on frequency

$\omega$  represents the frequency of a sine wave when we write it this way  $\sin \omega t$  if  $\omega = 1$  the  $\sin$  completes one cycle in  $2\pi$  seconds if

$\omega = 2\pi f$  the sin completes one cycle sooner every 1 second for  $f = 1$  if  $\omega = 2\pi f$  the sin completes one cycle even faster every 1  $f$  seconds or equivalently sin completes  $f$  cycles in 1 second
