*Surgery for Snoring and Obstructive Sleep Apnea Syndrome* Mario Fabiani, 2003 Introduction Bocca della Verità or Mouth of Truth is the logo of the Unit for the Study and Therapy of Sleep Respiratory Disorders at the University of Rome La Sapienza. It was chosen because its round shape with surprised expression, small nose, and open mouth mirrors the typical face of a patient with OSAS pre therapy. The stone, diameter 1.75 m, in fact represents the face of a screaming faun and was originally found in the Mercury Temple area. According to popular legend, anyone putting his hand in the mouth will have it cut off if he has told a lie.

When I first became involved in the field of OSAS about ten years ago, I had no idea that this activity would become foremost in both my professional and my academic life. My curiosity was aroused when a patient of mine, an extremely fat patient whom I had been following for a long time regarding a hearing problem, asked me for a prescription for CPAP. He had read in a newspaper that this device could solve his nocturnal respiration and diurnal hypersomnolence problems. Suddenly I was confronted with documentation on snoring, OSAS, polysomnography, upper airway surgery, and positive pressure devices. I was then and still am now a Professor of Audiology. Audiology was and still is the object of my love, but it is mainly a

speculative discipline It involves physics electronics psychology rehabilitation and great possibilities for basic research However only rarely does an audiological patient obtain full satisfaction clinically Patients with neurosensorially based deafness can be rehabilitated but with difficulty conductive hearing loss is light and recovers automatically in most cases in a few cases the patient can be packed up and delivered to the ear surgeon or audioprosthetic technician Vertigo is dramatic but recovers spontaneously or after long term rehabilitation or it is categorized as a neurological symptom Tinnitus is frustrating and the audiologist centers most of his time and energy on trying to convince the patient to forget it In fact it is very rare to see a patient affected by an audiological disease recover after intervention by an audiologist Furthermore most patients are either very old or very young With OSAS patients things are very different The patient is usually at the peak of his life he has serious disturbances in his social familial and working spheres he is sedentary and is often a manager with a disordered of lifestyle does not partake in any sport smokes and drinks too much he has become irritable apathetic and is starting to worry about dying during the night or suffocating He has been followed for years for his arterial hypertension and latent arrhythmia He or often she is a snorer and after complaints from their partner sleeps in a separate room His sex life is affected and he often gets up during the night convinced that he has prostatic problems too Unfortunately for many years no one thought that these kinds of patients should consider consulting an otolaryngologist and at the same time otolaryngologists never thought of taking care of this pathology As soon I started to see the first cases and was able to solve their obstruction the number of patients being referred grew dramatically as did my skill in this field It was a really rewarding job After years of hyperspecialistic practice I returned to patient care in its entirety Sometimes a simple intervention such as nasal septoplasty or tonsillectomy i e one of those interventions so often underestimated by more expert colleagues was able to solve some of the serious problems of life In the meantime specific new techniques came into being radiofrequencies oral appliances diode lasers tongue suspension devices while at the same time diagnostic instrumentation such as polysomnography became more flexible and could more easy to be applied to obstructive disorders By 1997 my department was in an uproar about OSAS since I had got most of my colleagues interested in becoming involved and the first sponsor was my former chief Roberto Filipo who gave me his approval space to work in and encouragement to overcome all the problems My other colleagues and I would like to mention all of them here Giorgio Bandiera Maurizio Barbara Gian Antonio Bertoli Ferdinando D Ambrosio Elio De Seta Simonetta Masieri Antonio Minni Simonetta Monini Virgilio Pizzichetta Mario Patrizi Maurizio Saponara and Antonino Sciuto either directly or indirectly also offered to put their experience into writing various sections for this book A specific section was also organized at the Institute and I was able to coordinate some of our residents who have recently taken on the task of apostles spreading the knowledge they acquired on OSAS during their time with us to other hospitals in the region I must mention them too since very often they did most of the work and in OSAS that is a lot of work Francesca Auriti Angelo Clarici Fulvio Di Fulvio Arianna Mattioni Angela Mollica Maria Laura

Panatta Barbara Pichi Raniero Pucci Mario Rinaldi Rocco Roma Anna Sambito Ilenia Schettino Rocco Schettino Emanuela Sitzia Artur Zajmi and others The diagnosis and treatment of and scientific research into OSAS is a multidisciplinary task and I succeeded in involving many professors from related disciplines at the hospital of the University La Sapienza Carlo Cannella for Alimentation and Human Nutrition Eugenio Gaudio for Anatomy Giuseppe Calcagnini for Cardiology Vincenzo Bonifacio and Debora Giannini for Endocrinology Adolfo Francesco Attili for Gastroenterology Franco Angelico for Internal Medicine Giorgio Iannetti for Maxillo Facial Surgery Giuseppe Amabile for Neurology Maria Pia Villa for Pediatrics Alessandro Perrone and Ilio Cammarella for Pneumology and Carlo De Dominicis for Urology They used their experience in treating these patients and present their results in their contributions to this book During the same period the diagnosis and therapy of OSAS was spreading fast to all otolaryngological units at universities and hospitals throughout Italy It was easy for me to share my enthusiasm and thus we built up a network of close cooperation Any otolaryngologist will know these contributors so well that it would be easy for him to find their papers in this book but still I want to mention those who were closest in advising and helping me Marco Fusetti from L Aquila Luigi D Angelo and Vieri Galli from Naples Pietro Ferrara Riccardo Speciale and Salvatore Restivo from Palermo Oskar Schindler from Turin and Maurizio Maurizi and Vittorio Pierro from Rome The time was now ripe to confront the world nomenclature on OSAS The dream to share a rendezvous with all or most of the prominent people from all the disciplines involved in both the clinical and scientific research on OSAS was realized in 1997 at the ROMA OSAS First International Conference on the Diagnosis and Therapy of Snoring and OSAS which was followed by a second meeting in the year 2000 and a third in 2002 I only have to mention the names of the presidents of these conferences to testify to the high quality that was achieved Giovanni Bonsignore Gisle Djupesland Roberto Filipo Christian Guilleminault Meir Kryger Elio Lugaresi It would be inappropriate to mention here only some of those who also took part and there are too many to mention them all since they are all equally important I was very honored to ask them for and to receive papers for this book Some of the abstracts presented at these conferences are also included in this book as highlights on various subjects due to their particular relevance And so finally you now know how this book was born It is the collection of an enthusiastic beginner who persuaded his friends and or colleagues from his department his university his country and the entire scientific community to submit papers on the basics and state of the art of relevant topics regarding snoring and OSAS which hopefully in its turn will help those other enthusiastic beginners who wish to improve their knowledge on the care of apneic patients Also even though many of the chapters are written by participants at the ROMA OSAS Conferences this book is not an abstract volume of those meetings It does however represent the scientific development unearthed on those occasions For this reason I think it would also be a valid textbook on OSAS from an otolaryngological point of view After the many thanks due to the contributors my final thanks must go to the person who had the patience to cooperate with me on the editorial work Peter Bakker of Kugler Publications My confrontations with him were

often thorny but we both had the same goal in mind to offer you the best possible product We hope that you will agree with us that this book will be a useful addition both to your practice and to your continuing education Mario Fabiani     *The Evolution of Emotional Communication* Eckart Altenmüller, Sabine Schmidt, Elke Zimmermann, 2013-01-24 Why do we think that we can understand animal voices such as the aggressive barking of a pet dog and the longing meows of the family cat Why do we think of deep voices as dominant and high voices as submissive Are there universal principles governing our own communication system Can we even see how close animals are related to us by constructing an evolutionary tree based on similarities and dissimilarities in acoustic signaling Research on the role of emotions in acoustic communication and its evolution has often been neglected despite its obvious role in our daily life When we infect others with our laugh soothe a crying baby with a lullaby or get goose bumps listening to classical music we are barely aware of the complex processes upon which this behavior is based It is not facial expressions or body language that are affecting us but sound They are present in music and speech as emotional prosody and allow us to communicate not only verbally but also emotionally This groundbreaking book presents a thorough exploration into how acoustically conveyed emotions are generated and processed in both animals and man It is the first volume to bridge the gap between research in the acoustic communication of emotions in humans with those in animals using a comparative approach With the communication of emotions being an important research topic for a range of scientific fields this book is valuable for those in the fields of animal behaviour anthropology evolutionary biology human psychology linguistics musicology and neurology     **The Auditory Cortex** Peter Heil, Henning Scheich, Eike Budinger, Reinhard König, 2005-05-06 Understanding human hearing is not only a scientific challenge but also a problem of growing social and political importance given the steadily increasing numbers of people with hearing deficits or even deafness This book is about the highest level of hearing in humans and other mammals It brings together studies of both humans and animals thereby giving a more profound understanding of the concepts approaches techniques and knowledge of the auditory cortex All of the most up to date procedures of non invasive imaging are employed in the research that is described     Neuropsychological Assessment Muriel Deutsch Lezak, Diane B. Howieson, Erin D.
