Emerson,2008-04-29 This book considers the politics of patronage appointments at the universities in Glasgow Edinburgh and St Andrews exploring the ways in which 388 men secured posts in three Scottish universities between 1690 and 1806 Most professors were political appointees vetted and supported by political factions and their leaders This comprehensive study explores the improving agenda of political patrons and of those they served and relates this to the Scottish Enlightenment Emerson argues that what was happening in Scotland was also occurring in other parts of Europe where in relatively autonomous localities elite patrons also shaped things as they wished them to be The role of patronage in the Enlightenment is essential to any understanding of its origins and course Shaping of the Medical Profession Kordesch,1999-07-01 Traces the establishment of the Royal College of Physicians and Surgeons of Glasgow as a licensing body to its eminence as a centre of teaching in the 18th century The text then covers the subsequent decline of the college in the 19th century with an account of how in conjunction with Glasgow University it re established itself as the guarantor of high medical standards of learning and practice **Becoming a Physician** Thomas Neville Bonner,2000 Focusing on the social intellectual and political context in which medical education took place Thomas Neville Bonner offers a detailed analysis of transformations in medical instruction in the United Kingdom France Germany and the United States between the Enlightenment and World War II From a unique comparative perspective this study considers how divergent approaches to medical instruction in these countries mirrored as well as impacted their particular cultural contexts The book opens with an examination of key developments in medical education during the late eighteenth century and continues by tracing the evolution of clinical teaching practices in the early 1800s It then charts the rise of laboratory based teaching in

the nineteenth century and the progression toward the establishment of university standards for medical education during the early twentieth century Throughout the author identifies changes in medical student populations and student life including the opportunities available for women and minorities

Essays on David Hume, Medical Men and the Scottish Enlightenment Roger L. Emerson, 2016-05-13 The Scottish Enlightenment was a period of intellectual and scientific progress in a country previously considered to be marginal to the European intellectual scene Yet the enlightenment was not about politeness or civic humanism but something more basic the making of an improved society which could compete in every way in a rapidly changing world David Hume writing in 1752 commented that industry knowledge and humanity are linked together by an indissoluble chain Collectively this volume of essays embraces many of the topics which Hume included under industry knowledge and humanity from the European Enlightenment and the Scots relation to it to Scottish social history and its relation to religion science and medicine Overarching themes of what it meant to be enlightened in the eighteenth century are considered alongside more specific studies of notable figures of the period such as Archibald Campbell 3rd Duke of Argyll and David Hume and the training and number of Scottish medical students Together the volume provides an opportunity to step back and reconsider the Scottish Enlightenment in its broader context and to consider what new directions this field of study might take
