A. Bilello,Roy E. Bates,James Riley,1970 Observations were made at 19 sites in and around the Fort Greely Military
Reservation in Alaska during the winter of 1966 67 to obtain data on the depth and physical properties of the snow cover
Snowfall in 1966 67 totaled 245 cm which was more than 2 1 2 times the seasonal normal Maximum snow depths of 80 to
100 cm were observed in a major portion of the reservation Measurements at nine sites showed that the snow density at Fort
Greely was generally light e g the average density in the forest did not exceed 0 24 g cu cm However exceptions such as at
Jarvis Creek where the density averaged 0 33 g cu cm could be expected On the average less snow falls at Fort Greely than
at other interior Alaskan locations but the average density of the snow cover at all interior Alaska sites is quite light
Relationships between snow cover properties and climate were tested using data collected at Fort Greely The results
substantiated the relationships between 1 snow hardness and snow density measurements and 2 average snow densities with
average windspeed and air temperatures Snow temperature measurements at Fort Greely showed that the snow in the forest
was colder than at exposed sites primarily because the average air temperature within the forest canopy was lower than that
