The Organisation of Knowledge in Victorian Britain Martin Daunton,2005-05-26 This collection of essays explores the questions of what counted as knowledge in Victorian Britain who defined knowledge and the knowledgeable by what means and by what criteria During the Victorian period the structure of knowledge took on a new and recognizably modern form and the disciplines we now take for granted took shape The ways in which knowledge was tested also took on a new form with the rise of written examinations New institutions of knowledge were created museums were important at the start of the period universities had become

prominent by the end Victorians needed to make sense of the sheer scale of new information to popularize it and at the same time to exclude ignorance and error a role carried out by encyclopaedias and popular publications By studying the Victorian organization of knowledge in its institutional social and intellectual settings these essays contribute to our wider consideration of the complex and much debated concept of knowledge **Alternative Pathways in Science and Industry**

David J. Hess, 2007-03-16 In *Alternative Pathways in Science and Industry* David Hess examines how social movements and other forms of activism affect innovation in science technology and industry Synthesizing and extending work in social studies of science and technology social movements and globalization Hess explores the interaction of grassroots environmental action and mainstream industry and offers a conceptual framework for understanding it Hess proposes a theory of scientific and technological change that considers the roles that both industry and grassroots consumers play in setting the research agenda in science and technology and he identifies alternative pathways by which social movements can influence scientific and technological innovation He analyzes four of these pathways industrial opposition movements organized against targeted technologies as in the campaign against nuclear energy technology and product oriented movements which press for alternatives as does the organic food movement localism which promotes local ownership as in buy local campaigns and access pathways which support a more equitable distribution of resources Within each pathway Hess examines reforms in five different areas agriculture energy waste and manufacturing infrastructure and finance The book's theoretical argument and empirical evidence demonstrate the complex pattern of incorporation of grassroots innovations and transformation of alternative ownership structures and the alternative products themselves that has characterized the relationship of industry and activism Hess's analysis of alternative pathways to change suggests ways economic organizations could shift to a more just and sustainable course in the twenty first century **1973 National**
