Techniques Of Event History Modeling:

Techniques of Event History Modeling Hans-Peter Blossfeld, Götz Rohwer, 2001-09-01 Including new developments and publications which have appeared since the publication of the first edition in 1995 this second edition gives a comprehensive introductory account of event history modeling techniques and their use in applied research in economics and the social sciences demonstrates that event history modeling is a major step forward in causal analysis To do so the authors show that event history models employ the time path of changes in states and relate changes in causal variables in the past to changes in discrete outcomes in the future and introduces the reader to the computer program Transition Data Analysis TDA This software estimates the sort of models most frequently used with longitudinal data in particular discrete time and continuous time event history data Techniques of Event History Modeling can serve as a student textbook in the fields of statistics economics the social sciences psychology and the political sciences It can also be used as a reference for scientists in all fields of research

Event History Modeling Janet M. Box-Steffensmeier, Bradford S. Jones, 2004-03-29 Publisher Description Introducing Survival and Event History Analysis Melinda Mills, 2011-01-19 This book is an accessible practical and comprehensive guide for researchers from multiple disciplines including biomedical epidemiology engineering and the social sciences Written for accessibility this book will appeal to students and researchers who want to understand the basics of survival and event history analysis and apply these methods without getting entangled in mathematical and theoretical technicalities Inside

readers are offered a blueprint for their entire research project from data preparation to model selection and diagnostics. Engaging, easy to read, functional and packed with enlightening examples, hands-on exercises, conversations with key scholars, and resources for both students and instructors, this text allows researchers to quickly master advanced statistical techniques. It is written from the perspective of the user, making it suitable as both a self-learning tool and a graduate-level textbook. Also included are up-to-date innovations in the field, including advancements in the assessment of model fit, unobserved heterogeneity, recurrent events, and multilevel event history models. Practical instructions are also included for using the statistical programs of R, STATA, and SPSS, enabling readers to replicate the examples described in the text.

Techniques of Event History Modeling Hans-Peter Blossfeld, 2001

Event History Analysis Paul David Allison, 1984-11

Drawing on recent event history analytical methods from biostatistics, engineering, and sociology, this clear and comprehensive monograph explains how longitudinal data can be used to study the causes of deaths, crimes, wars, and many other human events. Allison shows why ordinary multiple regression is not suited to analyze event history data and demonstrates how innovative regression-like methods can overcome this problem. He then discusses the particular new methods that social scientists should find useful.

Event History Analysis Kazuo Yamaguchi, 1991-07-18

In a manner similar to many other titles within the Applied Social Research Methods Series, this 182-page book thoroughly covers many of the specific methodological hurdles encountered in implementing event history analysis (EHA). The Applied Social Research Methods Series is the result of careful subject selection. Consistent with the practical orientation of the book, each of the application sections provides useful insights into data structure problems and programming notes. Kazuo Yamaguchi's insightful review of problems in structuring EHA models is useful for those contemplating life course research. We strongly recommend its inclusion in the libraries of marketing researchers and its inclusion on suggested reading lists of graduate research method seminars.

Journal of Marketing Research

This book, which is part of Sage Publications' Applied Social Research Methods Series, is a practical guide for those interested in using event history analysis. The book's strength is that it is well-written and easy to understand. Even those with limited statistical backgrounds can follow the discussion and the systematic progression from the simpler to the more complex models, although the author provides ample references for those wanting a more rigorous discussion. Upon finishing the book, I found myself wondering about specific accounting questions that might be addressed using event history analysis. There are many, and in fact, most issues can be recast in an events framework. In sum, I recommend this book to anyone wanting to use event history analysis, whether to apply to new research questions or to provide a fresh look at old questions.

The Accounting Review

A significant introduction to the event history literature that provides the background to implement this difficult methodology successfully and that can be supplemented with other more advanced texts. It will undoubtedly become a prized text among students and a valuable reference for the research community.

Contemporary Sociology

As a research tool, event history analysis has recently become a key technique for researchers, professionals, and

students in a wide range of disciplines However despite this increasing interest few resources exist which clearly examine this technique Now Event History Analysis provides a systematic introduction to models methods and applications of event history analysis Kazuo Yamaguchi emphasizes hands on information including the use and misuse of samples models and covariates in applications the structural arrangement of input data the specification of various models in such computer programs as SAS LOGIST and SPSS LOGLINEAR and the interpretation of parameters estimated from models This timely book also offers such significant topics as missing data hazard rate Cox s partial likelihood model survivor function and discrete time logit models for both one way and two way transitions Event History Analysis is essential for researchers professionals and students of public health sociology labor economics political science and organization studies

Causal Analysis with Event History Data Using Stata Hans-Peter Blossfeld, Götz Rohwer, Gwendolin J. Blossfeld, 2025-07-28 This third edition of *Causal Analysis with Event History Data Using Stata* provides an updated introduction to event history modeling along with many instructive Stata examples Using the latest Stata software each of these practical examples develops a research question points to useful contextual background information gives a brief account of the underlying statistical concepts describes the organization of input data and the application of Stata statistical procedures and assists the reader in interpreting the content of the results obtained Emphasizing the strengths and limitations of continuous time event history analysis in different fields of social science applications this book demonstrates that event history models provide a useful approach to uncover causal relations or to map a system of causal relationships In particular this book demonstrates how long term processes can be studied how different forms of duration dependencies can be estimated using nonparametric parametric and semiparametric models and how parallel and interdependent dynamic systems can be analyzed from a causal analytical point of view using the method of episode splitting The book also shows how changing contextual information at the micro meso and macro levels can be easily integrated into a dynamic analysis of longitudinal data Finally the book addresses the problem of unobserved heterogeneity of time constant and time dependent omitted variables and makes suggestions for dealing with these sometimes difficult methodological problems *Causal Analysis with Event History Data Using Stata* is an invaluable resource for both novice and experienced researchers from a variety of fields e g sociology economics political science education psychology demography epidemiology management research and organizational studies as well as medicine and clinical applications who need an introductory textbook on continuous time event history analysis and who are looking for a practical handbook for their longitudinal research
