Mechanics for Materials and Technologies Holm Altenbach, Robert V. Goldstein, Evgenii Murashkin, 2017-04-02 This book shows impressively how complex mathematical modeling of materials can be applied to technological problems Top class researchers present the theoretical approaches in modern mechanics and apply them to real world problems in solid mechanics creep plasticity fracture impact and friction They show how they can be applied to technological challenges in various fields like aerospace technology biological sciences and modern engineering materials

Problems of Technological Plasticity B. Druyanov, R. Nepershin, 2013-10-22 In this book the classical rigid plastic model of deformed workpiece and the characteristic slipline method of analysis is assumed The rigid plastic solid assumption is deemed reasonable for the problems of technological plasticity with large scale plastic flow where small elastic strains are negligible Along with classical results of the theory of plasticity the book includes many original analytical and numerical solutions of the problems of technological plasticity obtained by the authors in Russia and unknown for most western readers The results of the analyses are given by analytical formulae and many graphs and tables so the book will be useful for the practical and research engineers It may also be used as a textbook by graduate students and engineers

Deformation and Fracture in Technological Processes Robert V. Goldstein, Yeong Maw Hwang, Yeau Ren Jeng, Cho Pei Jiang, 2012-11-12 Special topic volume with invited peer reviewed papers only

Advanced Methods in Materials Processing Defects M. Predelleanu, P. Gilormini, 1997-06-18 This collection of papers focus on advanced methods for predicting and avoiding the occurrence of defects in manufactured products A new feature is included namely the influence of the processing induced defects on the integrity of structures The following topics are developed damage modeling damage evaluation and rupture strain localization and instability analysis formability characterization prediction of shape inaccuracies influence of defects on structural integrity The main manufacturing operations are covered and various materials are examined such as new and conventional metal alloys ceramics polymers and composites
