Technologies Of The Gendered Body Reading Cyborg Women:

Technologies of the Gendered Body Anne Marie Balsamo, 1996 This book looks at the representation of the body in culture from a feminist perspective Subjects covered include bodybuilding cosmetic surgery and cyberculture The Gendered Cyborg Fiona Hovenden, Linda Janes, Gill Kirkup, Kathryn Woodward, 2013-09-13 The Gendered Cyborg explores the relationship between representation technoscience and gender through the metaphor of the cyborg The contributors argue that the figure of the cyborg offers ways of thinking about the relationship between culture and technology people and machines which disrupt the power of science to enforce the categories through which we think about being human male and female Taking inspiration from Donna Haraway's groundbreaking Manifesto for Cyborgs the articles consider how the cyborg has been used in cultural representation from reproductive technology to sci fi and question whether the cyborg is as powerful a symbol as is often claimed The different sections of the reader explore the construction of gender categories through science the interaction of technoscience and gender in contemporary science fiction film such as Blade Runner and the Alien series debates around modern reproductive technology such as ultrasound scans and IVF assessing their benefits and constraints for women issues relating to artificial intelligence and the internet **Devices & Desires** Margaret Sandelowski, 2000 The author traces the relationship between nursing and technology from the 1870s to the present She argues that while technology has helped shape and intensify persistent dilemmas in nursing it has also both advanced and impeded the development of the nursing profession Cyborg Cinema and Contemporary Subjectivity S. Short, 2004-11-10 This book breaks new ground in providing an in depth critical assessment of cyborg cinema arguing that it remains one of the most intriguing and provocative cycles to have emerged in contemporary screen culture Tracing the cinematic cyborg's transition over the last two decades and evaluating the theoretical significance attributed to this figure it asks what relevance the cyborg continues to have in terms of understanding human identity our relationship to technology and to one another *Technoscience in Contemporary Film* Aylish Wood, 2002 This analysis of images of science and technology from popular films of the 1980s and 1990s argues that films as diverse as the science fiction film Jurassic Park contribute to popular understandings of science and technology *The Scientific Imaginary in Visual Culture* Anneke Smelik, 2010 Popular media art and science are intricately interlinked in contemporary visual culture This book analyses the scientific imaginary that is the result of the profound effects of science upon the imagination and conversely of the imagination in and upon science As scientific developments in genetics occur and information technology and cybernetics open up new possibilities of intervention in human lives cultural theorists have explored the notion of the posthuman The Scientific Imaginary in Visual Culture analyses figurations of the posthuman in history and philosophy as well as in its utopian and dystopian forms in art and popular culture The authors thus address the blurring boundaries between art and science in diverse media like science fiction film futurist art video art and the new phenomenon of bio art In their evaluations of the

scientific imaginary in visual culture the authors engage critically with current scientific and technological concerns

Resilient Cyborgs Nelly Oudshoorn, 2020-04-02 This book examines how pacemakers and defibrillators participate in transforming life and death in high tech societies In both popular and medical accounts these internal devices are often portrayed as almost magical technologies Once implanted in bodies they do not require any user agency In this unique and timely book Nelly Oudshoorn argues that any discourse or policy assuming a passive role for people living with these implants silences the fact that keeping cyborg bodies alive involves their active engagement Pacemakers and defibrillators not only act as potentially life saving technologies but simultaneously transform the fragility of bodies by introducing new vulnerabilities Oudshoorn offers a fascinating examination of what it takes to become a resilient cyborg and in the process develops a valuable new sociology of creating resilient cyborgs The SAGE Handbook of Theoretical Psychology
