Technology In Today's Schools:

Digital Schools Darrell M. West, 2012-05-14 Nearly a century ago famed educator John Dewey said that if we teach today's students as we taught yesterday's we rob them of tomorrow. That wisdom resonates more strongly than ever today and that maxim underlies this insightful look at the present and future of education in the digital age. As Darrell West makes clear, today's educational institutions must reinvent themselves to engage students successfully and provide them with the skills needed to compete in an increasingly global technological and online world. Otherwise the American education system will continue to fall woefully short in its mission to prepare the population to survive and thrive in a rapidly changing world. West examines new models of education made possible by enhanced information technology: new approaches that will make public education in the post-industrial age more relevant, efficient, and ultimately more productive. Innovative pilot programs are popping up all over the nation, experimenting with different forms of organization and delivery systems. *Digital Schools* surveys this promising new landscape, examining in particular personalized learning, real-time student assessment, ways to enhance teacher evaluation, the untapped potential of distance learning, and the ways in which technology can improve the effectiveness of special education and foreign language instruction. West illustrates the potential contributions of blogs, wikis, social media, and video games, and augmented reality in K-12 and higher education. Technology by itself will not remake education. But if today's schools combine increased digitization with needed improvements in organization, operations, and culture, we can overcome current barriers, produce better results, and improve the manner in which schools function. And we can get back to teaching for tomorrow rather than for yesterday.

Rethinking Education in the Age of Technology

Allan Collins, Richard Halverson, 2018-04-13 How can schools make the most of both the technology and the learning potential of today's born-digital students? Allan Collins and Richard Halverson argue that new technologies have transformed our workplaces, our lives, and our culture, and it is time that we take the next step to transform learning in and out of schools. This book explains why and how today's educators, policymakers, and communities must adapt to provide all learners with access to the new learning tools of the 21st century. From publisher's description.

Technology in Schools Kevin P. Brady, 2012-08-14 Education of America's school children always has been and always will be a hot-button issue. From what should be taught to how to pay for education to how to keep kids safe in schools, impassioned debates emerge and mushroom both within the scholarly community and among the general public. This volume in the point-counterpoint *Debating Issues in American Education* reference series tackles the topic of technology in schools. Fifteen to twenty chapters explore such varied issues as the digital divide, electronic textbooks, impacts on curricula, privacy on school computers, web censorship, and more. Each chapter opens with an introductory essay by the volume editor, followed by point-counterpoint articles written and signed by invited experts, and concludes with Further Readings and Resources, thus providing readers with views on multiple sides of technology issues within America's schools and pointing them toward more in-depth resources for further exploration.
