Technology Of Our Times People And Innovation In Optics And Optoelectronics:

Photonic Technology and Industrial Policy Ernest Sternberg,1992-01-01 A revolutionary technological development of the late twentieth century photonics embraces lasers fiber optics imaging devices and optical applications to computing It affects the fortunes of numerous industries and other than conventional microelectronics may now be the leading arena for worldwide technological rivalry While Japan has seen its photonic industries grow faster than any other high technology sector the United States where much of photonics originated has experienced a declining industrial capability in world markets Why is the U S floundering in this critical new technology Are market solutions adequate as a national response to such massive technological change After describing the history and economic implications of photonics this book places these questions in the context of industrial policy debates about the proper role of government in response to strategic industrial sectors The author then assesses the U S public policy response by examining various government programs directed at photonics These programs add up to an implicit government photonics policy but one that is shortsighted incoherent and unplanned Sternberg concludes that it is this failure to plan that explains United States retrogression in a critical technology

The Silicon Web Michael G. Raymer,2009-06-23 The technology behind computers fiber optics and networks did not originate in the minds of engineers attempting to build an Internet The Internet is a culmination of intellectual work by thousands of minds spanning hundreds of years We have built concept upon concept and technology upon technology to arrive at where we are today in a world co

Authors and Apparatus Monika Dommann,2019-03-15 Copyright is under siege From file sharing to vast library scanning projects new technologies actors and attitudes toward intellectual property threaten the value of creative work However while digital media and the Internet have made making and sharing perfect copies of original works almost effortless debates about protecting authors rights are nothing new In this sweeping account of the evolution of copyright law since the mid nineteenth century Monika Dommann explores how radical media changes from sheet music and phonographs to photocopiers and networked information systems have challenged and transformed legal and cultural concept of authors rights Dommann provides a critical transatlantic perspective on developments in copyright law and mechanical reproduction of words and music charting how artists media companies and lawmakers in the United States and western Europe approached the complex tangle of technological innovation intellectual property and consumer interests From the seemingly innocuous music box invented around 1800 to BASF s magnetic tapes and Xerox machines she demonstrates how copyright has been continuously destabilized by emerging technologies requiring new legal norms to regulate commercial and private copying practices Without minimizing digital media s radical disruption to notions of intellectual property Dommann uncovers the deep historical roots of the conflict between copyright and media a story that can inform present day debates over the legal protection of authorship
