## Technology Transfer in Strategic Alliances: Competitive Collaboration and Organizational Learning

VLADIMIR PUCIK

### TECHNOLOGY TRANSFERS AND COMPETITIVE COLLABORATION

In the late 1980s, one of the striking patterns in global competition was the rapidly growing number of interfirm cross-border coalitions. While such ventures are intrinsically difficult to manage (Killing, 1983), many experts argue that as business risks soar and competition grows more severe, alliances among firms from different countries are becoming one of the key strategic responses to the emerging patterns of competition: companies are expected to rely on international alliances with increasing frequency (Perlmutter and Heenan, 1986; Harrigan, 1984; Ohmae, 1985).

Many of the new alliances, whether equity joint ventures or nonequity deals, involve some aspect of technology transfer. In contrast to traditional joint ventures or licensing arrangements—in which technology was often transferred from a large multinational to a small local partner who played only a marginal role in the execution of the global strategy pursued by the multinational firm—the new type of alliances often involves an intensive technological cooperation beyond the scope of the local market.

Strategic alliances involving transfer of technology can take many forms: technical exchange and cross-licensing, coproduction and marketing agreements, joint product development programs, or stand-alone joint-venture firms with equity distributed among the partners (Root, 1988). Although the specific deals vary in motivation, scope, and duration, they all involve leveraging the current competitive advantage of the collaborating firms. Some partnerships combine the superior design technology of one of the partners with the efficient manufacturing of the other partner to outsourcing of product development using local engineering capacity. Partners join to diversify the risks inherent in developing new technologies, or to take advantage of the complementary nature of each partner's development skills.

Collective Action in East Asia Gregory W. Noble, 2018-09-05 As one Asian economic crisis follows another sending shock waves through the global market questions about the making and conduct of industrial policy in the East take on a special urgency Observers are sharply divided as to whether the ubiquitous attempts at cooperation among competing firms in Asia have been a key to competitiveness or a corrosive form of collusion This timely book offers a close look at the impact of industrial policies on collective action in East Asia in Japan and Taiwan and more briefly in South Korea Systematically comparative and based on interviews and original research in the local languages it focuses on forms of collective action such as cartels standardization and research and development consortia in the consumer electronics and minimill steel industries The book combines detailed case studies with analyses of the political bureaucratic and industrial environments in which policy is crafted It also considers how these environments have evolved in the past decade as long ruling conservative parties have been challenged in all three countries Among the book s findings is a surprising disparity between the ways in which Japan and Taiwan have handled collective action policy despite their many historical demographic and economic similarities Collective Action in East Asia also brings to light unexpected inconsistencies in the effectiveness of Japanese policy which frequently succeeds with R D consortia but struggles with cartels Studying both the rapid growth period of the 1980s and the more recent economic slowdown in East Asia this book provides crucial information for an understanding of today s global economy

**Teamwork Is an Individual Skill** Christopher M. Avery, Meri Aaron Walker, Erin O'Toole Murphy, 2001-04-09 Knowing how to work effectively in and through groups may be the single most important skill anyone can develop in today's collaborative, team-based workplace. Unfortunately, all of the resources available on teamwork put the emphasis on group process and ignore the role of and benefits to the individual. But effective teamwork isn't only a group skill set; it's an individual skill set as well. *Teamwork Is an Individual Skill* shows readers how to develop the skills to thrive on any team under any circumstances. No longer will readers find themselves complaining, "I got assigned to a bad team." Instead, they'll know what to do to make any team work for them. Drawing on over twenty years of experience successfully developing professional teams in product development, R & D, and high-tech environments, Christopher Avery and his coauthors use brief, thought-provoking essays, personal and teambuilding exercises, case studies, and insights from business leaders to teach readers how to build responsible and productive relationships at work. The authors show how and why your ability to assume personal responsibility for your own work on a team and for the team's collective work is the most important factor in ensuring a productive team experience. Teambuilding, the authors point out, is essentially a series of conversations between people who share responsibility to get something done. *Teamwork Is an Individual Skill* describes the way these conversations typically progress and shows the reader how to predict and direct these conversations so that they can maximize the benefits to both themselves and to their team. Designed for easy access and for use by both individuals and groups, *Teamwork Is an Individual Skill* will equip readers with the mental skills and behaviors that will help them achieve personal goals while contributing to their team's success.

**Managing Innovation and Entrepreneurship in Technology-Based Firms** Michael J. C. Martin, 1994-09-28 Describes principles and methodologies necessary to build efficient and highly productive work systems in high-tech organizations that must develop and deploy new products in a timely fashion with competitive advantage. Presents techniques applicable to small high-tech consumer products or large complex systems requiring cost control, waste minimization, and rapid product development. Stresses methodologies to be used for strategic advantage. Suggests diverse strategic plans and their pros and cons depending on the product and markets.

**From Lab to Market** S.K. Kassicieh, H.R. Radosevich, 2013-06-29 The topic of this book, the commercialization of public sector technology, continues to grow in importance in the United States and similar societies. The issues involved are relevant to many roles, including those of policy makers, managers, patent attorneys, licensing agents, and technical staff members of public technology sources. Institutions increasingly involved in the process include federal and other government laboratories and their related agencies, public universities, and their state governments, public and private transfer agents, and of course all the private recipients of public technology. Scarcely a day goes by without a significant event related to technology transfer and

commercialization The popular business press is regularly carrying articles addressing the issues explaining new initiatives and describing events of notable success or failure | As an example of current important events the Technology Reinvestment Project TRP is formulating its initiatives to transfer public technology and promote technology based public/private partnerships as a collaboration between the Advanced Research Projects Agency ARPA the National Institute of Standards and Technology NIST the National Science Foundation NSF the National Aeronautics and Space Administration NASA and the Department of Energy Defense Programs DOE DP
