Technology Transfer In The Developing Countries:

Technology Transfer in the Developing Countries Manas Chatterji, 1990-02-19 The objective of this book is to present the problems and possibilities of transferring technology from the developed countries to the developing countries. It presents the conceptual issues, legal ramifications, empirical testing of mathematical models, and case studies of different industries.

International Technology Transfer to Developing Countries Kamal Saggi, 2004 Bridging the technology gap is an issue faced by most countries, but in developing countries the issue is doubly critical: not only do they lag further behind relative to other countries, but they face more stringent resource constraints. Part one of this report identifies the role played by existing policy in trade, foreign direct investment, and intellectual property rights in facilitating International Technology Transfer. Part two provides a thorough overview of the economics of ITT relevant to developing countries and will be invaluable as a reference tool for policy makers, trade officials, and trade negotiators.

Information Resources and Technology Transfer Management in Developing Countries Richard Ouma-Onyango, 1997 This book attempts to put information management in the context of technology transfer, industrialization, and national development. The author shows how critical the efficient use of information resources can be in terms of productivity. He also examines the costs of poor information management in undermining negotiation, the preparation of contingencies, and the ability to let go of dead projects. To this end, case studies of two technology transfer projects in Kenya, the National Power Alcohol and National Car Programme, are considered over a period of twenty years.

Strategic Planning in Technology Transfer to Less Developed Countries Christian Madu, 1992-01-27 Despite an avalanche of literature over the last 30 years, there has been relatively little written on the role played by strategic planning in the transfer of technology, particularly from developed to less developed countries. Technology transfer, which involves the acquisition of inventive activity by secondary users, is conceded vital to socio-economic growth, but usually it is looked at internationally from a micro perspective. Unlike other books, Madu's volume looks at technology transfer holistically. It examines the advantages of technology transfer and its limitations by viewing recipient nations as systems in which social, economic, behavioral, and political influences converge to help shape technological decisions. Only when a systems perspective like this is adopted and technology seen as a strategic variable can technology transfer be understood and successfully implemented, says Madu. Madu thus identifies the failures of technology transfer as the result of malfunctions in three components of the system: technology structure and behavior. He analyzes these malfunctions, offers ways to repair them, and considers technology from the viewpoints of both transferrer and receiver, whose missions, goals, and objectives are often not only disparate but sometimes in conflict. He then offers what he calls prescriptive frameworks and guidelines to help implement

transfer and to see it as a variable that must be integrated into national development planning Throughout Madu makes it clear that the objective of technology transfer is the maximizing of social welfare Using this overarching premise he is able to evaluate both the benefits and the social costs associated with technology transfer and to develop his prescriptive integrative models Intended for specialists in international finance and development and international business management Madu's book will be of special value to teachers of graduate courses in socio economic development public policy and economics and to policymakers throughout government
