Computational Cultural Neuroscience Joan Y. Chiao, 2024-08-02 This book provides novel insights into the study of empirical computational approaches in the field of cultural neuroscience. It discusses and analyses topics such as cultural intelligence, cultural machine learning, cultural brain dynamics, and cultural security. This comprehensive text engages with computational principles to guide the research on the influence of cultural environments on human genetics. It explores the theoretical and methodological approaches involved in computational neuroscience. Policymaking for Critical Infrastructure Gordon A. Gow, 2019-06-04 Originally published in 2005, By weaving together three distinct fields: public policy, technology studies, and management of critical infrastructure, this volume shows how public policy can help to improve the management of large technical systems. A much needed analytical framework based on approaches drawn from established work in science and technology studies is applied to a case study of the development of a new public safety service for mobile telephones. This example of emerging growth and change in critical infrastructure allows Gordon Gow to identify current problem areas and to refine a more general set of strategies aimed at improving public policy processes in the management of technology. The work also discusses a range of contemporary issues in telecom policy and regulation such as public consultation, technical standards, network unbundling, and interconnection. This insightful work provides observations and recommendations for policy makers, regulators, industry, and consumer groups alike, furthering the improved coordination of efforts across these domains of interest.

International Symposium on Theory and Practice in Transport Economics: Key Issues for Transport beyond 2000 15th International Symposium on Theory and Practice in Transport Economics, Thessaloniki, Greece, 7th - 9th June 2000 European Conference of Ministers of Transport, 2002-06-07 A clear dichotomy exists between an European economy centred on international trade and the environmental damage to which this focus gives rise. There is a need for a novel approach based on a shift away from the goal of ever faster travel and

Federal Register, 2014 **Principles of Environmental Sciences** Jan J. Boersema, Lucas Reijnders, 2008-12-12 International experts provide a comprehensive picture of the principles, concepts, and methods that are applicable to problems originating from the interaction between the living/non-living environment and mankind. Both the analysis of such problems and the way solutions to environmental problems may work in specific societal contexts are addressed. Disciplinary approaches are discussed, but there is a focus on multi- and interdisciplinary methods. A large number of practical examples

and case studies are presented There is special emphasis on modelling and integrated assessment This book is different because it stresses the societal cultural and historical dimensions of environmental problems The main objective is to improve the ability to analyse and conceptualise environmental problems in context and to make readers aware of the value and scope of different methods Ideal as a course text for students this book will also be of interest to researchers and consultants in the environmental sciences

Public Participation in Science Simon Joss, John Durant, 1995 The call for increased public involvement in the formulation of science and technology policy has resulted in the consensus conference an initiative which involves lay people in the assessment of socially sensitive topics This book draws together the pioneering experiences of the Danish Dutch and British organisers of consensus conferences as well as offering a scheme developed at a multinational two day workshop in 1995 in London for producing comparable data for the evaluation of consensus conferences

Meeting Public Demands Project 2000 (U.S.), 1988 *Why Democracies Need Science* Harry Collins, Robert Evans, 2017-03-27 We live in times of increasing public distrust of the main institutions of modern society Experts including scientists are suspected of working to hidden agendas or serving vested interests The solution is usually seen as more public scrutiny and more control by democratic institutions experts must be subservient to social and political life In this book Harry Collins and Robert Evans take a radically different view They argue that rather than democracies needing to be protected from science democratic societies need to learn how to value science in this new age of uncertainty By emphasizing that science is a moral enterprise guided by values that should matter to all they show how science can support democracy without destroying it and propose a new institution The Owls that can mediate between science and society and improve technological decision making for the benefit of all

The New Politics of Science David Dickson, 1988 How science gets done in today s world has profound political repercussions since scientific knowledge through its technical applications has become an important source of both economic and military power The increasing dependence of scientific research on funding from business and the military has made questions about the access to and control of scientific knowledge a central issue in today s politics of science In *The New Politics of Science* David Dickson points out that the scientific community has its own internal power structures its elites its hierarchies its ideologies its sanctioned norms of social behavior and its dissenting groups And the more that science as a social practice forms an integral part of the economic structures of the society in which it is imbedded the more the boundaries and differences between the two dissolve Groups inside the scientific community for example will use groups outside the community and vice versa to achieve their own political ends In this edition Dickson has included a new preface commenting on the continuing and increasing influence of industrial and defense interests on American scientific research in the 1980s
