Telecommunications Optimization:

Handbook of Optimization in Telecommunications Mauricio G.C. Resende, Panos M. Pardalos, 2008-12-10 This comprehensive handbook brings together experts who use optimization to solve problems that arise in telecommunications. It is the first book to cover in detail the field of optimization in telecommunications. Recent optimization developments that are frequently applied to telecommunications are covered. The spectrum of topics covered includes planning and design of telecommunication networks, routing, network protection, grooming, restoration, wireless communications, network location and assignment problems, Internet protocol, World Wide Web, and stochastic issues in telecommunications. The book's objective is to provide a reference tool for the increasing number of scientists and engineers in telecommunications who depend upon optimization.

Networking and Telecommunications: Concepts, Methodologies, Tools, and Applications

Management Association, Information Resources, 2010-01-31 This multiple volume publication exhibits the most up to date collection of research results and recent discoveries in the transfer of knowledge across the globe. Provided by publisher.

Graphs and Algorithms in Communication Networks Arie Koster, Xavier Muñoz, 2009-12-01 Algorithmic discrete mathematics plays a key role in the development of information and communication technologies and methods that arise in computer science, mathematics, and operations research. In particular, in algorithms, computational complexity, distributed computing, and optimization are vital to modern services such as mobile telephony, online banking, and VoIP. This book examines communication networking from a mathematical viewpoint. The contributing authors took part in the European COST action 293, a four year program of multidisciplinary research on this subject. In this book they offer introductory overviews and state of the art assessments of current and future research in the fields of broadband, optical, wireless, and ad hoc networks. Particular topics of interest are design, optimization, robustness, and energy consumption. The book will be of interest to graduate students, researchers, and practitioners in the areas of networking, theoretical computer science, operations research, distributed computing, and mathematics.

Telecommunications Optimization

David W. Corne, Martin J. Oates, George D. Smith, 2000-11-02 Written in an accessible and easy to read style, this cutting edge book presents advanced solutions to current and future telecommunications optimization problems. The field of telecommunications is growing and changing ever more rapidly, presenting new real world problems for optimization researchers to address. Telecommunications engineers tend to know all about the problems involved but are often not aware of developments in computer science and artificial intelligence that might solve those problems. This unique book takes a collaborative approach, describing the essence of the problems and then the heuristic and adaptive techniques which are now recognised as adept at solving these problems. In addition, the emerging technologies in telecommunications and increasing use of the Internet expand the role that advanced heuristic and adaptive methods can play. Topics covered include heuristic techniques covering local search methods and population based search techniques, adaptive computation techniques.

covering neural computation fuzzy logic and game theory Practical and successful ways to address problems in network design and planning routing protocol design and network management This state of the art book will be an essential resource for optimization researchers needing a wider appreciation of the problems in telecommunications and indispensable for telecommunications engineers using heuristic and adaptive techniques **Bio-Inspired Computation in**
