Implantable Biotelemetry Systems Thomas B. Fryer, 1971 With the advent of manned space flight the National Aeronautics and Space Administration NASA has conducted intensive investigations on the physiological makeup of the human body The last decade has seen major advances in the use of radiotelemetry in physiological research Revolutionary developments in microelectronics are making possible smaller telemetry systems that can be wholly implanted in laboratory animals The NASA Ames Research Center has been in the fore front of such research and has developed many implantable biotelemetry devices now considered by many as a standard method for monitoring physiological functions in animals This report describes biotelemetry developments at Ames tracing the evolution of concepts underlying the accurate and reliable biotelemetry systems of today Such systems are described in sufficient detail for the reader to select designs to meet specific needs Through its Technology Utilization Program NASA strives to make the results of such work widely available for the use of those outside the aerospace community This publication is one of a series intended to achieve those objectives Foreword
