The First House Myth Paradigm And The Task Of Architecture:

The First House R. D. Dripps, 1997 In the first century BC Vitruvius Pollio narrated a myth of the origins of dwelling In a forest clearing previously isolated and savage people gathered about the embers of a dying fire from this gathering emerged political institutions human language and the construction of permanent shelters This volume finds in this story the foundation of an extensive theory of architecture still able to offer guideposts for architectural practice Against any tendency toward theoretical disengagement or self referentiality the author argues that architecture must continue to address important political cultural and ecological issues Ultimately the role of architecture is to provide the structures that enable us to interpret the world and make it habitable Proceedings of the International Conference on Religious Architecture (ICRA 2024) Sutrisno Murtiyoso, Alvin Hadiwono, Titin Fatimah, Nafiah Solikhah, Samsu Hendra Siwi, 2025-06-26 This is an open access book Religion produced noteworthy architectures from the beginning of humanity Religion gives meaning and direction to human life and in the process unites and empowers human beings to direct their aspirations and resources to build spectacular works of houses of worship and gathering Religious architecture fills a significant part of history of architecture Since ages for the religions of mankind human beings have evolved a plethora of forms in simple stone buildings to the ones in sophisticated modern materials and technologies From an architectural point of view every building built for religion is sacred meaning it is dedicated to the powers beyond However the manifestations are so much varied as they depend on the regulations sanctioned by different religious teachings combined with the society's culture and tradition and the builder's intentions and aspirations Added to that are the local environmental factors the availability of building materials existing building technology and the time span of its development From what we know today the oldest religious architecture could be found in Gobekli Tepe built around 10 000 years ago when humanity still lived as hunter gatherers Architecture developed further into megalithic period became increasingly monumental in the medieval age with colossal royal worship complexes Up to modern times we keep on building religious architectures with increasing elaboration The International Conference on Religious Architecture is organized with a hope to broaden our understanding and perspective in this often neglected field The study in religious architecture is more acutely felt in the regions outside of Europe and America while the demand is clearly pressing today The Conference should serve as a forum for scholars in the field hopefully being the first one in a series

The Cultural Role of Architecture Paul Emmons, John Shannon Hendrix, Jane Lomholt, 2012 Exploring the ambiguities of how we define the word culture in our global society this book identifies its imprint on architectural ideas Chapters written by international academics in history theory and philosophy of architecture examine how different modes of representation throughout history have drawn profound meanings from cultural practices and beliefs The Courtyard House Nasser O. Rabbat, 2017-07-05 The courtyard house is one of the most enduring architectural forms transcending regional historical and cultural boundaries Its balance of simple appropriate construction environmental control and social

and familial structures continues to engage architects and architectural historians That the courtyard house is still relevant today is indicated through its ability to accommodate continual transformation without losing any of its formal integrity and cultural roots This book presents a series of viewpoints on courtyard houses from different periods and in different regions around the world from the Harem courtyards of the Topkapi Palace and the low cost housing settlements of Protectorate Casablanca to contemporary design strategies for courtyard houses in the arid Gulf region Together the essays illuminate issues of particular relevance in architectural art historical and conservation discourses today Phenomenology,

Architecture and the Built World James Dodd, 2017-01-05 Phenomenology Architecture and the Built World is an introduction to the methods and basic concepts of phenomenological philosophy through an analysis of the phenomenon of the built world The conception of the built world that emerges is of space and time fashioned in accordance with a living understanding of what it is for human beings to exist in the world Human building and making is thus no mere supplementary instrument in the pursuit of the ends of life but a fundamental embodiment of the self understanding of human beings Phenomenological description is uniquely capable of bringing into view the physiognomy of this understanding its texture and complexity thereby providing an important basis for a critique of what constitutes its essence and its conditions of possibility **Big**

House Little City Benedict Zucchi, 2023-09-08 Shortlisted for the Architectural Book Awards 2024 Combining architectural and urban thinking in an unusual and engaging way this book presents an integrated approach to architectural theory and design Leon Battista Alberti's assertion in his famous Renaissance treatise that the city is like a big house and the house is in turn like a little city forms the springboard for a series of reflections on architecture's relationship with urbanism and how their once intimate symbiosis unravelled by International Style Modernism can be recovered Explicit references to Alberti's house city phrase have been made by figures as diverse as the architects Louis Kahn Aldo Van Eyck Denys Lasdun and Niels Torp and novelist Italo Calvino But as the book shows thinking of buildings as little cities provides a new lens through which to reappraise the contributions of many other architects including Le Corbusier Frank Lloyd Wright Alvar Aalto Eliel Saarinen Bernard Rudofsky Hans Scharoun Leon Krier Fumihiko Maki Charles Correa and Team 10 In doing so the author identifies common themes that form an unexpected bridgehead between the urban and architectural approaches of Antiquity the Middle Ages Renaissance and 20th century The book explores buildings from across the globe including lesser known projects such as Wright's unbuilt house in Italy or Saarinen's master plan for Cranbrook Academy as well as more recent projects by Niels Torp Behnisch Architekten Sou Fujimoto Peter Barber and WOHA It concludes with practical case studies of residential health education and workplace projects from different countries fulsomely illustrated with many drawings and photographs These show how architectural design viewed through an urban lens provides a conceptual framework for breaking down the scale of large buildings and integrating them with their context And crucially these also show a very accessible way of explaining evolving designs to the intended users and eliciting their participation in the design process The

book offers a compelling approach to the design of projects at all scales within an ecological perspective the sense that big and small cities and buildings must be approached holistically if we are to reverse the degradation and depletion of our habitat both natural and man made **Architecture History, Theory and Preservation** Arleen

Pabón-Charneco, 2020-11-29 Architecture History Theory and Preservation critically explores the historic development theoretical underpinnings and conservation practices of architecture Complete with 170 full color images this volume presents architectural and urban examples from Prehistory to the Middle Ages chronologically and thematically examining contextual issues that provide each period with distinctive expressions The special features structural systems materials and construction technologies are analyzed as well as how the international community deals with the task of interpreting and preserving certain historic properties This publication provides professors and students of architecture art history historic preservation and related fields with an integrated view of architecture using historical theoretical and conservation perspectives As an architect architectural historian and preservationist herself Dr Pab n Charneco weaves a field of relationships regarding each building creating a silent yet empowering bridge between past and present Transcending
