soil and site quality and are thus useful when planning ecosystem function improvements Earthworm s populations are indicators in degraded regions and in soil reclamations Aristotle called them intestines of the earth and the eminent nineteenth century biologist Charles Darwin spent many years observing their major influence on humus formation and soil transport However the links between their impacts on the soil environment and the resulting modification of natural selection pressures on engineers as well as on other organisms have received little attention Based on papers recently published in the Science journal Phillips et al 2019 document an impressive group effort by 141 researchers from 35 countries to develop a global scale atlas of earthworms In addition Fierer 2019 described the earthworms place on earth So Darwin s legacy continues Despite the vast increase in scientific literature on earthworms in recent years much remains to be known of their basic biology ecology and functioning In this book we summarized the current knowledge in relation to ecological processes involved with earthworms in croplands rangelands forests and urban soils
