SOAP PHOTODERMATITIS

Photosensitivity
to

Halogenated Salicylanilides

Soap photodermatitis is a problem which has become of increasing clinical importance in the past decade. It may well go unrecognized by the uninformed. This book details the historical and clinical aspects of photosensitivity to the halogenated salicylanilides which are used as antibacterial agents in many soaps and other cosmetic preparations.

Soap Photodermatitis Photosensitivity To Halogenated Salicylanilides:

Soap Photodermatitis; Photosensitivity to Halogenated Salicylanilides Peter Simon Herman, W. Mitchell Sams, 1972 **The Science of Photomedicine** J.D. Regan, 2012-12-06 Although the history of photomedicine dates back thousands of years with even preliterate cultures appreciating the healing properties of sunlight for many workers in the discipline photomedicine is associated with the observation about 100 years ago of Niels Finsen a Danish physician Finsen recognized that people with tuberculosis who lived in Norway and who had very little exposure to sunlight often developed facial lesions lupus vulgaris which would decrease and sometimes disappear during the summer months This very observant physician reasoned that artificial light ought to produce the same effect as sunlight and began utilizing the radiation from the newly available carbon arc At first he used a glass lens to concentrate the radiation but since this produced considerable burning he replaced this with a hollow glass lens filled with water However while this reduced the heat burns it did not actually duplicate the effect of direct sunlight Finally using a hollow lens filled with water but equipped with quartz windows Finsen was able to imitate even improve upon the effect of sunlight As a result lupus vulgaris was practically eliminated from the Scandinavian countries **Photobiology** E. Riklis, 2012-12-06 It is not always the case that the subject of a scientific book and its relevance to everyday life are so timely Photobiology and its sister subject Radiobiology are now a must for understanding the environment we live in and the impact light ultraviolet light and radiation have on all aspects of our life Photobiology is a true interdisciplinary field Photobiology research plays a direct role in diverse fields and a glance at the topics of the symposia covered in this book by over 100 articles shows the breadth and depth of knowledge acquired in fundamental research and its impact on the major issues and applied problems the world is facing Half a century of photobiology research brought about an understanding of the importance of light to life both as a necessary source of energy and growth as well as its possible dangers Research in photochemistry and photobiology led to the discoveries of cellular repair mechanisms of UV induced damages to DNA and this led to understanding of the effects of hazardous environmental chemicals and mutagenicity and to the development of genetic engineering This topic was given due emphasis in several symposia and chapters in this book **Photosensitisation** Giuliana Moreno, Roy H. Pottier, Terence G. Truscott, 2013-06-29 Radiation induces a variety of chemical processes in biological tissues This volume is a synthesis of up to the minute reviews on such photochemical and photobiological sensitized reactions with particular relevance to photomedicine The first part gives a description of experimental techniques for the study of the primary processes after radiation absorption by biological systems It is followed by chapters on singlet oxygen and photomedicine considering both phototherapy and photochemotherapy These sections also discuss the next generation of potential photosensitizing drugs *Over-the-counter drugs* United States. Food and Drug Administration, 1980 **Federal Register**, 1974 Preamble Compilation United States. Immunological Aspects of Skin Diseases L. Fry,P.P. Seah,2013-12-21

Photoimmunology John Parrish,2013-11-11 In this book we attempt to summarize the present state of knowledge in the field of photoimmunology and to provide the background necessary to put this knowledge into perspective This objective requires descriptive overviews in photobiology immunology and dermatology Our hope is to facilitate interdisciplinary communication and to stimulate interest in photoimmunology

Section I Principles of Photoimmunology describes 1 basic interactions between UV and visible radiation and biologic matter 2 the optical properties of human skin and 3 normal and abnormal responses to UV radiation Basic principles of selected aspects of immunology and photobiology are explained

Section II Experimental Photoimmunology describes molecular cellular animal

and human studies in photoimmunology Section III Clinical Photo immunology presents evidence of the involvement of photoimmunologic mechanisms in diseases of the skin and blood and examines the possible involvement of immunologic mechanisms in therapeutic photomedicine The fundamental principles outlined in this book should prove useful for decades to come However our expectation is that the experimental data will be outdated in a short period of time The potential of photoimmunology is great enough and the serious study of photo immunology is recent enough that this should be the case This book is dedicated to the goal of continuing rapid growth in the field of photoimmunology *National Library of Medicine Current Catalog* National Library of Medicine (U.S.),1973 First multi year cumulation covers six years 1965 70
