Tuberculosis, Leprosy and Mycobacterial Diseases of Man and Animals Harshini Mukundan, Mark Chambers, Ray Waters, Michelle Larsen, 2015-09-28 Mycobacteria are bacterial pathogens which cause diseases in humans and non human animals This monograph will primarily cover the most important and widely researched groups of mycobacteria members of the Mycobacterium tuberculosis complex MTC and Mycobacterium leprae across a wide range of host species M tuberculosis and M bovis are particularly relevant with the increasing drug resistance and co infection with HIV associated with M tuberculosis and the possible cross infection of badgers and cattle associated with M bovis This book will provide a reference for researchers working in different fields creating a work which draws together information on different pathogens and by considering the diseases in a zoonotic context provides a One Health approach to these important groups of diseases

Animal Social Networks Dr. Jens Krause, Richard James, Daniel W. Franks, Darren P. Croft, 2015 The scientific study of networks computer social and biological has received an enormous amount of interest in recent years However the network approach has been applied to the field of animal behaviour relatively late compared to many other biological disciplines Understanding social network structure is of great importance for biologists since the structural characteristics of any network will affect its constituent members and influence a range of diverse behaviours These include finding and choosing a sexual partner developing and maintaining cooperative relationships and engaging in foraging and anti predator behavior This novel text provides an overview of the insights that network analysis has provided into major biological processes and how it has enhanced our understanding of the social organisation of several important taxonomic groups It brings together researchers from a wide range of disciplines with the aim of providing both an overview of the power of the network approach for understanding patterns and process in animal populations as well as outlining how current methodological constraints and challenges can be overcome Animal Social Networks is principally aimed at graduate level students and researchers in the fields of ecology zoology animal behaviour and evolutionary biology but will also be of interest to social scientists

and deal with issues related to the detection spread and control of Mycobacterium bovis as well as the economic impact of outbreaks Zoonotic Tuberculosis Mycobacterium bovis and Other Pathogenic Mycobacteria offers valuable information for public health officials medical doctors state and federal regulatory veterinarians veterinary practitioners and animal caretakers Perturbation, Behavioural Feedbacks, and Population Dynamics in Social Animals Daniel Oro, 2020 In social animals perturbations may trigger specific behavioural responses with consequences for dispersal and complex population dynamics Perturbations raise the need for information gathering in order to reduce uncertainty and increase resilience Updated information is then shared within the group and social behaviours emerge as a self organized process This social information factorizes with the size of the group and it is finally used for making crucial decisions about for instance when to leave the patch and where to go Indeed evolution has favoured philopatry over dispersal and this trade off is challenged by perturbations When perturbations accumulate over time they may decrease the suitability of the patch and erode the philopatric state until crossing a tipping point beyond which most individuals decide to disperse to better areas Initially the decision to disperse is led by a few individuals and this decision is copied by the rest of the group in an autocatalytic way This feedback process of social copying is termed runaway dispersal Furthermore social copying enhances the evolution of cultural and technological innovation which may cause additional nonlinearities for population dynamics Social information gathering and social copying have also occurred in human evolution especially after perturbations such as climate extremes and warfare In summary social feedback processes cause nonlinear population dynamics including hysteresis and critical transitions from philopatry to patch collapses and invasions which emerge from the collective behaviour of large ensembles of individuals *Social Work Practice in the Field of Tuberculosis* University of Pittsburgh. Graduate School of Social Work, 1954 *Handbook of Research Methods in Social and Personality Psychology* Harry T. Reis, Charles M. Judd, 2014-02-24 This indispensable sourcebook covers conceptual and practical issues in research design in the field of social and personality psychology Key experts address specific methods and areas of research contributing to a comprehensive overview of contemporary practice This updated and expanded second edition offers current commentary on social and personality psychology reflecting the rapid development of this dynamic area of research over the past decade With the help of this up to date text both seasoned and beginning social psychologists will be able to explore the various tools and methods available to them in their research as they craft experiments and imagine new methodological possibilities **Tuberculosis in Animals: An African Perspective** Asseged B. Dibaba, Nicolaas P. J. Kriek, Charles O. Thoen, 2019-07-01 This book recounts the biology of M bovis followed by the status of bovine Tuberculosis bTB in African countries primarily based on zoonotic and epidemiological field reports Since the accumulation of data is valueless unless it led to practicable control measures emphasis is put on locally adapted protocols for future control of the disease In order to systematically evaluate the knowledge base of bTB Epidemiologic Problem Oriented Approach EPOA methodology was used The methodology is

composed of two triads i the problem identification characterization triad which is mainly descriptive in nature and ii the problem management solution mitigation triad which is mainly geared toward problem management solution see figure The first triad comprises three pillars i agent ii host and iii environment and the second one i therapeutics treatment ii prevention control and iii health maintenance promotion The two triads are linked together by the diagnostic procedure linkage The systematic and detailed studies of the Host Agent Environment interactions are the building blocks to the understanding of agent transmission pathways and disease spread These may include data about the disease status of the country the nature of the disease agent and its hosts the modes of transmission the wildlife reservoirs in nature persistence of infection and agent survival in animal products and the environment The problem identification and characterization triad identifies these interactions Once a problem has been identified and well understood the next step is to minimize the risk of transmission and spread of a disease This area referred to as problem solution management triad consists of problem management alternatives that rely upon prevention control and health maintenance promotion of the disease in livestock wildlife and humans with the emphasis on resource poor developing countries in Africa

Disease, Class and Social Change Marc Arnold,2012-11-15 This previously unexamined history of open air treatment in English coastal resorts demonstrates how contrasting meanings were assigned to tuberculosis along lines of class It assesses the shifting inter relation of medical political and social forces in determining responses to this devastating disease and analyses the relationship between scientific ideas in particular social evolution and germ theory and attitudes to poverty and chronic disease In Folkestone and Sandgate these conflicting perceptions of the disease were highlighted in a clash of interests between reformist public health officials in overcrowded London Boroughs and a provincial plutocracy with a vested interest in maintaining the status quo in an elite health resort This local controversy precipitated calls for state treatment of the disease and throws light on the ways in which doctors politicians and academics have tended to frame the issue of tuberculosis according to their own political perspectives and values Medical approaches to tuberculosis varied between viewing it as a disease of poverty that could most efficiently be eradicated through addressing problems of poor housing and overcrowding to a focus on the isolation and sterilisation of those deemed to possess an hereditary taint Conflicts between an infection model of the disease and a focus on social reform still characterise approaches to tuberculosis treatment today

Animal Behavior and Parasitism Vanessa Ezenwa,Sonia M. Altizer,Richard Hall,2022-08-04 We live in a world teeming with parasites Many animal behaviors including social interactions mating displays and decisions about where to move nest and forage are shaped by interactions with parasites The same is true for humans where our attraction to mates hygienic behaviors food choices and decisions about when and where to gather in groups often depend on current and perceived infection risk In turn behaviors like social distancing and self medication can alter the trajectories of parasite transmission and evolution as vividly illustrated by the ongoing COVID 19 pandemic The myriad connections between animal behavior and parasitism have been the subject of growing research interest since the 1970s and 80s when fundamental theories linking the two fields of study emerged Since then a combination of conceptual and technological advances and increased integration of ideas across disciplines have helped to uncover fascinating new connections between animal behavior and the ecology and evolution of infectious diseases This accessible text surveys emerging research in this vibrant field Chapters focus on fundamental topics at the interface of animal behavior and parasitism and authors have been selected to provide a diverse and international perspective Animal Behavior and Parasitism is an upper level text suitable for senior undergraduate and graduate level students as well as professional researchers in animal behavior behavioral ecology disease ecology parasitology and evolutionary biology Transactions of the Sixth International Congress on Tuberculosis v. 8 ,1908
