Dominic F. Gullo,M. Elizabeth Graue,2020-04-23 Scientific Influences on Early Childhood Education offers a new framework for examining the diverse scientific perspectives that shape early childhood education As the field takes on an increasing role in addressing children s educational developmental and environmental needs it is critical to more fully understand and appreciate the diverse scientific roots of contemporary early childhood education This edited collection brings together leading researchers to explain and unpack perspectives that are not often associated with early childhood education yet have made significant contributions to its development and evolution Essential reading for anyone working with young children this critical and insightful text illuminates the connections between our social values science and research in the field *The Four Streams of the Prefrontal Cortex* Dorit Ben Shalom,Yoram S. Bonne,2024-12-17 The prefrontal cortex contains Brodmann areas BA8 BA9 BA10 BA11 BA12 BA13 BA14 BA24 BA25 BA32 BA44 BA45 BA46 and

BA47 and it is thought to be involved in psychological functions such as executive tasks attention and memory This Research Topic concerns BA8 BA9 BA10 and BA11 only since they are the most rostral and might be involved in more elementary computations as compared to say BA46 which is clearly involved in working memory This region of the brain is often treated as an undifferentiated structure on the one hand or as a mosaic of psychological faculties on the other A third option is to address the landscape of the prefrontal cortex anatomically and functionally based on the premise that structure and function are inextricably related This Research Topic sees itself as a descendant of Goldman Rakic s horizontal division of the prefrontal cortex into spatial where more output oriented areas in the dorsal prefrontal cortex and object what more input oriented areas in the ventral prefrontal cortex **Behavior Analysis and Learning** W. David Pierce, Carl D.

Wilson, 2000-03-24 When this classic was first published in 1975 it created a new discipline and started a tumultuous round in the nature versus nurture debate In the introduction to this edition Wilson shows how research in human genetics and neuroscience over the past quarter of a century has strengthened the case for a biological understanding of human nature

Introduction to Psychology Christopher Peterson, 1991 **Resources in Women's Educational Equity**, 1979

The American Journal of Sociology Albion W. Small, Ellsworth Faris, Ernest Watson Burgess, 1925 **Experimental models of early exposure to alcohol: a way to unravel the neurobiology of mental retardation** Alberto Granato, Andrea De Giorgio, 2015-01-27 Excessive alcohol drinking represents a major social and public health problem for several countries Alcohol abuse during pregnancy leads to a complex syndrome referred to as fetal alcohol spectrum disorders FASD chiefly characterized by mental retardation The effects of early exposure to ethanol can be reproduced in

laboratory animals and this helped to answer several key questions concerning the human pathology. The interest of experimental models of FASD is twofold. First, they increase our knowledge about the dose and modality of alcohol consumption able to induce damaging effects on the developing brain. Second, experimental models of FASD can provide useful hints to elucidate the basic mechanisms leading to the intellectual disability. In fact, experimental exposure to alcohol can be carried out during discrete, often very restricted, time windows. As a consequence, FASD models, though depending on the multifaceted interference of alcohol with several molecular pathways, can provide valuable information about which specific developmental periods and brain areas are critically involved in the genesis of mental retardation. Putting together data obtained through several experimental paradigms of alcohol exposure and those deriving from other genetic and non-genetic models, one can figure out to what extent different types of mental retardation share common pathogenetic mechanisms. The present Research Topic is aimed at establishing the state of the art of the current research on experimental FASD, focusing on differences and homologies with other types of intellectual disability. The ultimate goal is to find out a common roadmap in view of future therapeutical approaches.

Causality and Development Gerald Young, 2019-02-28. The third book in Young's unique trilogy on causality and development continues to locate and define the central role of causality in biopsychosocial and network systems development and as a unifying concept of psychology itself. As a way of discussing causality in general, initially the book focuses on the acquisition of handedness and hemispheric specialization in infancy and childhood and their relations to the development of cognition, language, and emotion. In particular, the second part of the book elaborates an innovative 25-step Neo-Eriksonian model of development across the life course based on a Neo-Piagetian model covered in the previous books, completing a step-by-step account of development over the lifespan, cognitively and socio-emotionally. It builds on the concept of neo-stage, which is network-based. From this conceptual synthesis, the author's robust theory of development and causality identifies potential areas for psychological problems and pathology at each developmental step, as well as science-based possibilities for their treatment. This elegant volume presents a clear picture of the development of handedness and laterality in more depth than has been attempted in the literature to date. It traces the causal concepts of activation, inhibition, coordination, and networking in the context of development. It describes in depth a novel 25-step Neo-Eriksonian lifespan model of development. It reviews relevant research on Piagetian and Eriksonian theories in development. It emphasizes the clinical utility of the described 25-step Neo-Eriksonian approach to lifespan development. A significant step in understanding this highly nuanced subject and synthesizing a broad knowledge base. *Causality and Development* will find an interested audience among developmental psychologists, mental health practitioners, academics, and researchers.

Cannabis and the Developing Brain Miriam Melis, Olivier J. Manzoni, 2022-08-18. Marijuana is the most commonly used psychotropic drug in the United States after alcohol. With the legalization and decriminalization of cannabis, momentum continues to build and is propelled by the reduction of stigma associated to its consumption. There is

growing concern regarding the long term impact on brain function and behavior Cannabis and the Developing Brain aims to provide comprehensive research on the effects of cannabis during neurodevelopment stages i e perinatal and adolescent ages This book introduces readers to vivo neural circuits molecular and cellular mechanisms affected by cannabis exposure during three different temporal windows of brain vulnerability Second it offers a unique insight to shared neurobiological features of cannabinoid exposure during different developmental periods Lastly Cannabis and the Developing Brain determines the adverse impact of developmental cannabinoid exposure on specific cognition emotion and behaviors Reviews exposure effects on different areas and circuits of the brain Identifies effects of exposure at prenatal perinatal infant and adolescent ages Includes cannabis interaction with known genetic and environmental risk factors Contains neurodevelopment and neuropsychiatric disorders associated with cannabis exposure *Environmental Health Perspectives* ,1993 **Handbook of Developmental Cognitive Neuroscience, second edition** Charles A. Nelson, Monica Luciana, 2008-07-11 The second edition of an essential resource to the evolving field of developmental cognitive neuroscience completely revised with expanded emphasis on social neuroscience clinical disorders and imaging genomics The publication of the second edition of this handbook testifies to the rapid evolution of developmental cognitive neuroscience as a distinct field Brain imaging and recording technologies along with well defined behavioral tasks the essential methodological tools of cognitive neuroscience are now being used to study development Technological advances have yielded methods that can be safely used to study structure function relations and their development in children s brains These new techniques combined with more refined cognitive models account for the progress and heightened activity in developmental cognitive neuroscience research The Handbook covers basic aspects of neural development sensory and sensorimotor systems language cognition emotion and the implications of lifelong neural plasticity for brain and behavioral development The second edition reflects the dramatic expansion of the field in the seven years since the publication of the first edition This new Handbook has grown from forty one chapters to fifty four all original to this edition It places greater emphasis on affective and social neuroscience an offshoot of cognitive neuroscience that is now influencing the developmental literature The second edition also places a greater emphasis on clinical disorders primarily because such research is inherently translational in nature Finally the book s new discussions of recent breakthroughs in imaging genomics include one entire chapter devoted to the subject The intersection of brain behavior and genetics represents an exciting new area of inquiry and the second edition of this essential reference work will be a valuable resource for researchers interested in the development of brain behavior relations in the context of both typical and atypical development *The Psychobiology of Attachment and Separation* Martin Reite, 2012-12-02 The Psychobiology of Attachment and Separation provides an understanding of certain theoretical issues involved in social attachment and separation The book brings together a number of investigators studying animal and human models of the psychobiology of attachment and separation The contributors are actively conducting studies that incorporate

physiological measures in attachment separation paradigms Thus the book s unique features include reviews and interpretations of recent data on the physiological correlates of attachment and separation behavior in both animals and humans The book is divided into two parts one on animal models and one on human models The first part reviews research from several animal species including studies on the biology of maternal behavior and physiological neurochemical and neuroanatomical correlates of both attachment and separation The chapters on animal models provide an overview of the state of knowledge on both the biology of social attachment and the biological correlates of separation The second part presents reviews and new data on attachment and separation in human infants A summary chapter examines both animal and human data and offers a synthesis of the results including clinical implications and ideas for future research **Iron as**

Therapeutic Targets in Human Diseases Paolo Arosio,Maura Poli,Raffaella Gozzelino,2020-02-11 Iron is an essential element for almost all organisms a cofactor playing a crucial role in a number of vital functions including oxygen transport DNA synthesis and respiration However its ability to exchange electrons renders excess iron potentially toxic since it is capable of catalyzing the formation of highly poisonous free radicals As a consequence iron homeostasis is tightly controlled by sophisticated mechanisms that have been partially elucidated Because of its biological importance numerous disorders have been recently linked to the deregulation of iron homeostasis which include not only the typical disorders of iron overload and deficiency but also cancer and neurodegenerative diseases This leads iron metabolism to become an interesting therapeutic target for novel pharmacological treatments against these diseases Several therapies are currently under development for hematological disorders while other are being considered for different pathologies The therapeutic targeting under study includes the hepcidin ferroportin axis for the regulation of systemic iron homeostasis complex cytosolic machineries for the regulation of the intracellular iron status and its association with oxidative damage and reagents exploiting proteins of iron metabolism such as ferritin and transferrin receptor A promising potential target is a recently described form of programmed cell death named ferroptosis in which the role of iron is essential but not completely clarified This Special Issue has the aim to summarize the state of the art and the latest findings published in the iron field as well as to elucidate future directions **Psychiatric Vulnerability, Mood, and Anxiety Disorders** Jaanus Harro,2022-09-30

This volume looks at classic and novel methods currently used by researchers to understand mood and anxiety disorders and foster precision medicine Chapters in this book cover topics such as how the sucrose preference succeeds or fails as a measurement of anhedonia fear conditioning in laboratory rodents animal models for mania rodent models for studying the impact of variation in early life mother infant interactions on mood and anxiety and prediction of susceptibility resilience toward animal models of PTSD In the Neuromethods series style chapters include the kind of detail and key advice from the specialists needed to get successful results in your laboratory Comprehensive and cutting edge accommodating the novel views on how the neurobiology of psychiatric disorders should be reconceptualized Psychiatric Vulnerability Mood and

Anxiety Disorders Tests and Models in Mice and Rats is a valuable resource for all researchers interested in learning more about this important and developing field
