The Industrial Revolution was a period of major technological and social change that transformed the world This book explores the impact of the Industrial Revolution on work the environment and society with a particular focus on the experiences of women Prior to the Industrial Revolution women played an active role in the economy working in agriculture cottage industries and other trades However as factories became the dominant mode of production women were increasingly pushed out of the workforce This was due to a number of factors including the belief that women were not suited for factory work the lower wages paid to women and the lack of childcare options As a result of these changes women were forced to find new ways to support themselves and their families Many women turned to prostitution begging or other forms of informal work Others were forced to rely on the charity of their families or communities The Industrial Revolution also had a negative impact on the environment The use of coal and other fossil fuels led to air and water pollution The deforestation of forests and the loss of biodiversity were also major problems The Industrial Revolution also led to a number of social changes The rise of the working class and the growth of cities led to new forms of social unrest The Industrial Revolution also led to the rise of new ideologies such as socialism and communism This book explores the impact of the Industrial Revolution on work the environment and society and it offers a fresh perspective on this important period in history

Children have worked for centuries and continue to work The history of the economic development of Europe and North America includes numerous instances of child labor Manufacturers in England France Belgium Germany and Prussia as well as the United States used child labor during the initial stages of industrialization In addition child labor prevails currently in many industries in the Third World This book examines the explanations for child labor in an economic context A model of the labor market for children is constructed using the new economics of the family framework to derive the supply of child labor and the traditional labor theory of marginal productivity to derive the demand for child labor The model is placed into a historical context and is used to test the existing supply and demand induced explanations for an increase in child labor during the British Industrial Revolution Evidence on the extent of childrens employment their specific tasks and trends in their wages from the textile industry and mining industry is used to support the argument that it was technological innovation which created a demand for child labor Certain

mechanical inventions and process innovations increased the demand for child labor in three ways increasing number of assistants needed increasing the substitutability between children and adults and creating work situations that only children could fill Specific innovations in the production of textiles and in the extraction of coal copper and tin are highlighted to show how they favored the use of child workers over adult workers The book concludes with a look at the current situations in developing countries where child labor is prevalent Considerable insight is gained on the role of child labor in economic development when this historical model is applied to the contemporary situation
