## **Technological Systems And Development:**

*Technological Systems and Development* Jeffrey James, Haider A. Khan, 1998-06-15 This book explores the notion of a technological system and more specifically the distinction between modern and traditional technological systems Using highly disaggregated data for a range of sectors and developing countries we have applied this distinction to micro as well as macro economic policy issues By identifying distinct systems of technology in a multisectoral model of the economy we have been able to quantify certain aspects of those systems within a rigorous conceptual framework The relationship between income distribution the choice of technology and its subsequent impact is examined in detail      **Technological Systems and Industrial Dynamics** B. Carlsson, 1997-06-30 This volume constitutes a summary of several years multi disciplinary research by a group of Swedish researchers The project Sweden's Technological Systems and Future Development Potential was initiated by the Swedish National Board for Industrial and Technical Development NUTEK and has been carried out at the Department of Industrial Management and Economics at Chalmers University of Technology in Gothenburg the Research Policy Institute at the University of Lund the Industrial Institute for Economic and Social Research IUI in Stockholm and the Department of Industrial Economics and Management at the Royal Institute of Technology Stockholm under the direction of Bo Carlsson Case Western Reserve University Cleveland Ohio The project group decided early on to focus first on the technological system for factory automation a relatively mature system of great importance to Swedish industry and in which Sweden has reached a leading position internationally and then to shift the attention to other systems in various stages of development and with varying Swedish strength The work on factory automation resulted in numerous papers and publications summarized in a volume published in 1995 *Technological Systems and Economic Performance The Case of Factory Automation* ed Bo Carlsson Dordrecht      **The Social Construction of Technological Systems, anniversary edition** Wiebe E. Bijker, Thomas Parke Hughes, Trevor Pinch, 2012-05-18 An anniversary edition of an influential book that introduced a groundbreaking approach to the study of science technology and society This pioneering book first published in 1987 launched the new field of social studies of technology It introduced a method of inquiry social construction of technology or SCOT that became a key part of the wider discipline of science and technology studies The book helped the MIT Press shape its STS list and inspired the Inside Technology series The thirteen essays in the book tell stories about such varied technologies as thirteenth century galleys eighteenth century cooking stoves and twentieth century missile systems Taken together they affirm the fruitfulness of an approach to the study of technology that gives equal weight to technical social economic and political questions and they demonstrate the illuminating effects of the integration of empirics and theory The approaches in this volume collectively called SCOT after the volume's title have since broadened their scope and twenty five years after the publication of this book it is difficult to think of a technology that has not been studied from a SCOT perspective and impossible to think of a technology that cannot be studied that way      **Technological Systems and**

**Economic Performance: The Case of Factory Automation** B. Carlsson, 2012-12-06 In 1987 the Swedish National Board for Technical Development STU later becoming the Swedish National Board for Industrial and Technical Development NUTEK initiated a study of Sweden's Technological Systems and Future Development Potential A comprehensive interdisciplinary study was envisioned yielding not only useful insight but also a permanent competence base for future analyses of technological systems and technology policy in Sweden Three leading Swedish research institutes were invited to participate the Industrial Institute for Economic and Social Research in Stockholm the Department of Industrial Management and Economics at Chalmers University of Technology in Gothenburg and the Research Policy Institute at the University of Lund I was invited to direct the project The project group decided to focus initially on a particular technological system namely factory automation to be followed by similar studies of other systems Numerous publications have resulted from the project thus far The current volume represents a summary of our work on factory automation It consists of several original essays and of some previously published papers which have been edited in some cases substantially in order to form a comprehensive and coherent picture of a technological system To our knowledge this is the first in depth analysis of a technological system designed as a component of a systematic study of technological systems more generally At the time of this writing three further studies on electronics and computers pharmaceuticals and powder technology are under way to be published in a later volume

**The Development Of Large Technical Systems** Renate Mayntz, Thomas Hughes, 2019-07-11 This book is an outcome of the conference on the development of large technical systems held in Berlin in 1986 It focuses on the comparative analysis of the development of large technical systems particularly electrical power railroad air traffic telephone and other forms of telecommunication

**Technological Systems and Development** Jeffrey James, 1998 The Social Construction of Technological Systems Wiebe E. Bijker, Thomas Parke Hughes, Trevor J. Pinch, Trevor Pinch, 1989 The impact of technology on society is clear and unmistakeable The influence of society on technology is more subtle The 13 essays in this book have been written by a diverse group of scholars united by a common interest in creating a new field the sociology of technology They draw on a wide array of case studies from cooking stoves to missile systems from 15th century Portugal to today's AI labs to outline an original research program based on a synthesis of ideas from the social studies of science and the history of technology Together they affirm the need for a study of technology that gives equal weight to technical social economic and political questions Back cover

**Changing Large Technical Systems** Jane Summerton, 2021-12-13 This international anthology presents case studies of historical and contemporary transformations of large technical systems such as railways telecommunications electricity and automobiles The authors working at the forefront of historical and social science research on the dynamics of large technical systems analyze how and why these systems undergo change Because of their important roles in contemporary society large technical systems such as railways airlines road systems telecommunications and electric power network share drawing considerable academic and

political interest In this collaborative study on processes of change in large technical systems the contributing authors present historical and current case studies of transformation within these systems Working at the forefront of historical and social science research on the dynamics of large technical systems the authors specifically analyze how and why the systems undergo change In some cases new technologies are solving old problems and presenting opportunities for system growth In other areas new regulatory approaches have brought competition and deregulation often posing challenges to system builders The authors also show how the breakup of national boundaries and new corporate strategies for global management of technology are transforming systems in ways that will have significant impacts on all consumers **Social Science,**

**Technical Systems, and Cooperative Work** Geoffrey Bowker, Susan Leigh Star, Les Gasser, William Turner, 2014-05-12 This book is the first to directly address the question of how to bridge what has been termed the great divide between the approaches of systems developers and those of social scientists to computer supported cooperative work a question that has been vigorously debated in the systems development literature Traditionally developers have been trained in formal methods and oriented to engineering and formal theoretical problems many social scientists in the CSCW field come from humanistic traditions in which results are reported in a narrative mode In spite of their differences in style the two groups have been cooperating more and more in the last decade as the people problems associated with computing become increasingly evident to everyone The authors have been encouraged to examine rigorously and in depth the theoretical basis of CSCW With contributions from field leaders in the United Kingdom France Scandinavia Mexico and the United States this volume offers an exciting overview of the cutting edge of research and theory It constitutes a solid foundation for the rapidly coalescing field of social informatics Divided into three parts this volume covers social theory design theory and the sociotechnical system with respect to CSCW The first set of chapters looks at ways of rethinking basic social categories with the development of distributed collaborative computing technology concepts of the group technology information user and text The next section concentrates more on the lessons that can be learned at the design stage given that one wants to build a CSCW system incorporating these insights what kind of work does one need to do and how is understanding of design affected The final part looks at the integration of social and technical in the operation of working sociotechnical systems Collectively the contributors make the argument that the social and technical are irremediably linked in practice and so the great divide not only should be a thing of the past it should never have existed in the first place *Transitions To Alternative Energy Systems* Thomas Baumgartner, 2019-03-22 The industrial world was built to run on cheap oil and now the cheap oil has run out For a while longer the West will depend for its energy upon expensive oil much of it obtained from sources that are geographically remote or politically unstable so in the near future the world must shift from oil to other sources of energy TRANSITIONS TO ALTERNATIVE ENERGY SYSTEMS explores how such change can best be encouraged The governments of the world then do not have the option of piously washing their hands of the energy crisis They must be

involved they must pursue wise policies and they must prove far more effective in the future than they have in the past  
Through its careful analysis of past programs to promote renewable resource development Tom Baumgartner s new book  
provides the public sector with precisely the kind of guidance it needs
