Technology And Cosmogenesis:

Technology and Cosmogenesis Paolo Soleri, 1985 **Ecocritique** Timothy W. Luke, 1997 Technology Assessment and Development Mangalam Srinivasan, 1982 **Encyclopedia of Twentieth Century Architecture** R. Stephen Sennott, 2004

For more information including the introduction a full list of entries and contributors a generous selection of sample pages and more visit the Encyclopedia of 20th Century Architecture website Focusing on architecture from all regions of the world this three volume set profiles the twentieth century's vast chronicle of architectural achievements both within and well beyond the theoretical confines of modernism Unlike existing works this encyclopedia examines the complexities of rapidly changing global conditions that have dispersed modern architectural types movements styles and building practices across traditional geographic and cultural boundaries *Theology and Technology, Volume 1* Carl Mitcham, Jim Grote, Levi

Checketts, 2022-07-21 Originally published nearly forty years ago as a spiritual successor to Carl Mitcham and Robert Mackey's *Philosophy and Technology* the essays collected in the two volumes of *Theology and Technology* span an array of theological attitudes and perspectives providing sufficient material for careful reflection and engagement The first volume offers five general attitudes toward technology based off of H. Richard Niebuhr's five ideal types in *Christ and Culture* The second volume includes biblical historical and modern theological engagements with the place of technology in the Christian life This ecumenical collection ranges from authors who enthusiastically support technological development to those cynical of technique and engages the Christian tradition from the church fathers to recent theologians like Bernard Lonergan and Jacques Ellul Taken together these essays some reproductions of earlier work and others original for this project provide any student of theology a fitting entrance into considering the place of technology in the realm of the sacred **The Practice of**

Technology Alan Drengson, 1995-10-12 Asks why current practices of technology negatively impact humans and the earth and how we can gain a holistic understanding so technology practices can be changed to support the environment

Manifesto for a Global Civilization Matthew Fox, Brian Swimme, 1982 **The Technocene** Hermínio Martins, 2018-12-15 Hermínio Martins was one of the key pioneers of the sociology of science and technology He published extensively in Portuguese and was recognized for his academic contributions with an honorary doctorate at Lisbon 2006 and two Portuguese Medals of Honour Following his retirement from the University of Oxford he wrote prolifically in English on a wide range of topics that examined the ethical and societal consequences of the commoditization of the human body and mind These essays are deep philosophical reflections on our contemporary world and draw extensively and eclectically upon a wide range of theoretical influences including continental philosophy history and psychology to name but a few disciplines The *Technocene* is a selection of some of these insightful essays made available to a global audience for the first time

Telos, 1994 **Critical Posthumanism and Planetary Futures** Debashish Banerji, Makarand R. Paranjape, 2016-10-07 This volume is a critical exploration of multiple posthuman possibilities in the 21st century and beyond

Due to the global engagement with advanced technology we are witness to a species wise blurring of boundaries at the edge of the human. On the one hand we find ourselves in a digital age in which human identity is being transformed through networked technological intervention a large part of our consciousness transferred to smart external devices. On the other hand we are assisted or assailed by an unprecedented proliferation of quasi human substitutes and surrogates forming a spectrum of humanoids with fuzzy borders. Under these conditions critical posthumanism asks who will occupy and control our planet. Will the superhuman merely serve as another sign under which new regimes of dominance are spread across the earth. Or can we discover or invent technologies of existence to counter such dominance. It is issues such as these which are at the heart of this new volume of explorations of the posthuman. The essays in this volume offer leading edge thought on the subject with special emphases on postmodern and postcolonial futures. They engage with questions of subalternity and feminism vis vis posthumanism dealing with issues of subjugation dispensability and surrogacy as well as the possibilities of resistance ethical politics or subjective transformation from South Asian archives of cultural and spiritual practice. This volume is a valuable addition to the on going global dialogues on posthumanism indispensable to those from across several disciplines who are interested in postcolonial and planetary futures.
