Technology In Schools:

Digital Schools Darrell M. West, 2013-07-15 Nearly a century ago famed educator John Dewey said that if we teach today's students as we taught yesterday's we rob them of tomorrow That wisdom resonates more strongly than ever today and that maxim underlies this insightful look at the present and future of education in the digital age As Darrell West makes clear today's educational institutions must reinvent themselves to engage students successfully and provide them with the skills needed to compete in an increasingly global technological and online world Otherwise the American education system will continue to fall woefully short in its mission to prepare the population to survive and thrive in a rapidly changing world West examines new models of education made possible by enhanced information technology new approaches that will make public education in the post industrial age more relevant efficient and ultimately more productive Innovative pilot programs are popping up all over the nation experimenting with different forms of organization and delivery systems Digital Schools surveys this promising new landscape examining in particular personalized learning realtime student assessment ways to enhance teacher evaluation the untapped potential of distance learning and the ways in which technology can improve the effectiveness of special education and foreign language instruction West illustrates the potential contributions of blogs wikis social media and video games and augmented reality in K 12 and higher education Technology by itself will not remake education But if today's schools combine increased digitization with needed improvements in organization operations and culture we can overcome current barriers produce better results and improve the manner in which schools function And we can get back to teaching for tomorrow rather than for yesterday

Stallard, 2001-11-13 How can educators survive in the whirlwind restructuring and reform caused by the digital age Will the impact of information technology improve learning and how The Promise of Technology in Schools answers these questions by surveying the next 20 years in education First Stallard examines why the transfer of technology to education has taken so long and has been so difficult to accomplish Then he examines what challenges educators will face how technology will affect school organization why the K 12 education market is so important and more

The Use of Instructional Technology in Schools Mal Lee, Arthur Winzenried, 2009 The Use of Instructional Technology in Schools examines teachers use of the major instructional technologies over the last century from the days of silent film radio and slide shows through to the modern interactive whiteboard and the Internet It explores the reasons why so few teachers have used these technologies and why even in today's digital world the most commonly used classroom tools are the pen paper and teaching board The book provides education decision makers with an invaluable insight into the million dollar question What is required to get all teachers across the nation using the appropriate instructional technology as a normal part of everyday teaching Without question student learning is enhanced by adopting these new technologies Until now research on why the majority of teachers use only the most basic tools in the classroom has been scarce The Use of Instructional Technology in Schools

examines this phenomenon and most importantly identifies what is required to achieve teachers universal acceptance of instructional technologies
