Halverson, Graham Shields-Zhou, 2011 In recent years interest in Neoproterozoic glaciations has grown as their pivotal role in Earth system evolution has become increasingly clear One of the main goals of the IGCP Project number 512 was to produce a synthesis of newly available information on Neoproterozoic successions worldwide This Memoir consists of a series of overview chapters followed by site specific chapters The overviews cover key topics including the history of research on Neoproterozoic glaciations identification of glacial deposits chemostratigraphic techniques and datasets palaeomagnetism biostratigraphy geochronology and climate modelling The site specific chapters include reviews of the history of research on these rocks and up to date syntheses of the structural framework tectonic setting palaeomagnetic geochronological constraints physical biological and chemical stratigraphy and descriptions of the glaciogenic and associated strata including economic deposits **U.S. Geological Survey Bulletin** Janet K. Koyi, Neil S. Mancktelow, 2001 In this reference for geologists 20 contributions from international scientists discuss the analytical physical and numerical modeling of tectonic processes A sampling of topics includes types of transpressional and transtensional deformation modeling of anisotropic grain growth in minerals salt tectonics and sedimentation along Atlantic margins and new apparatus for thermomechanical analogue modeling The text is accompanied throughout by b w illustrations Annotation c Book News Inc Portland OR booknews com *Earth's Glacial Record* M. Batholiths within the North American Cordillera Robert S. Hildebrand, Joseph B. Whalen, 2017-10-03 In this Special Paper Hildebrand and Whalen present a big picture paradigm busting synthesis that examines the tectonic setting temporal relations and geochemistry of many plutons within Cretaceous batholithic terranes of the North American Cordillera In addition to their compelling tectonic synthesis they argue that most of the batholiths are not products of arc magmatism as commonly believed but instead were formed by slab failure during and after collision They show that slab window and Precambrian TTG suites share many geochemical similarities with Cretaceous slab failure rocks Geochemical and isotopic data indicate that the slab failure magmas were derived dominantly from the mantle and thus have been one of the largest contributors to growth of continental crust The authors also note that slab failure plutons emplaced into the epizone are commonly associated with Cu Au porphyries as well as Li Cs Ta pegmatites *Upper Devonian-Mississippian Stratigraphic Sequences in the Distal Antler Foreland of Western Utah and Adjoining Nevada* Norman John Silberling, 1995 *Geologic Field Trips to the Basin and Range, Rocky Mountains, Snake River Plain, and Terranes of the U.S. Cordillera* Jeffrey Lee, James P. Mineral Resources of the North Stansbury Mountains Wilderness Study Area, Tooele County, Utah M. P. Foose, K. A. Duttweiler, Carl L. Almquist, 1989 *U.S. Geological Survey Bulletin* M. P. Foose, K. A. Duttweiler, Carl L. Almquist, 1989 Neogene Deformation between Central Utah and the Mojave Desert R. Ernest Anderson, 2013-10-24 This book is a must read for researchers interested in extensional tectonics in general and the Neogene tectonics of the Basin and Range in particular because it challenges on the basis of more than 50 years of field studies the existing paradigm of province wide uniformly large extension and replaces it with a model integrating extension with extension normal shortening both as primary strains The first chapter takes the reader on two journeys southwestward from central Utah through the Lake Mead area the first to emphasize the lack of uniformly distributed or integrated extension and the second to highlight left lateral shear at 13 localities along the east margin of the Basin and Range that is kinematically compatible with right lateral shear along the west margin The compatibility provides a basis for understanding the extreme Neogene tectonics of the Lake Mead area The second chapter summarizes multifaceted field evidence from the well studied eastern Lake Mead area as a focused example of the need for a complete revision of the extensional paradigm Publisher's description
