

Accounting Principles and Concepts

The Accounting Principles

They are several assumptions concerned with the recording of transactions in the books. The most important is that the financial statements known as the final accounts must be drafted in the same way. This is so that there is a common format that all accounting users of information can understand. The following will use the financial statements:

1. A banker - to decide on whether to provide the company with loan.
2. Investor - someone wishing to buy the business.
3. The owner to know his profit.
4. Tax department for tax purposes.

This means that the banker, the prospective buyer; of the business, the owner and the other people all see the same income statement (trading and profit and loss account) and balance sheet.

The following accounting **principles** are followed to provide consistent usable financial statements:

- 1) **Relevance:** Financial information is considered relevant if it affects the business decisions.
- 2) **Reliability:** Information should be free from significant errors, bias & independently verified.
- 3) **Comparability:** Could be compared with other periods and similar business.
- 4) **Understandability:** The financial report "Income statement (trading & profit & loss account) & balance sheet" must be capable of being understood by the users of the report.
