Over the last three decades the process industries have grown very rapidly with corresponding increases in the quantities of hazardous materials in process storage or transport. Plants have become larger and are often situated in or close to densely populated areas. Increased hazard of loss of life or property is continually highlighted with incidents such as Flixborough, Bhopal, Chernobyl, Three Mile Island, the Phillips 66 incident and Piper Alpha to name but a few. The field of Loss Prevention is and continues to be of supreme importance to countless companies, municipalities and governments around the world because of the trend for processing plants to become larger and often be situated in or close to densely populated areas thus increasing the hazard of loss of life or property. This book is a detailed guidebook to defending against these and many other hazards. It could without exaggeration be referred to as the bible for the process industries. This is THE standard reference work for chemical and process engineering safety professionals. For years it has been the most complete collection of information on the theory, practice, design, elements, equipment, regulations and laws covering the field of process safety. An entire library of alternative books and cross referencing systems would be needed to replace or improve upon it but everything of importance to safety professionals, engineers and managers can be found in this all encompassing reference. Instead, Frank Lees' world renowned work has been fully revised and expanded by a team of leading chemical and process engineers working under the guidance of one of the world's chief experts in this field, Sam Mannan, is professor of chemical engineering at Texas A&M. Principles, practice, codes, standards, data and references needed by those practicing in the field.

*Novel Ways and Methodologies to Improve Crop Yield*. Oorbessy Gaju, Miroslav Zoric, 2024-11-01. The global population is increasing at a much faster pace than an increase in the genetic gain for food production by plant breeding. Therefore we must find ways or methods to improve our food production if we are to ensure food security for all. This special edition is about the novel ways or methodologies that crop or plant scientists are working on to improve crop yield. This could fall under the physiological, biochemical, molecular or even any novel technological approaches such as phenotyping to rapidly select or find traits that are vital for the improvement of current germplasm to make them resilient to an ever changing environment. Crop yield, especially grain yield, is a very complex trait to deconvolute and understand as it is

influenced by so many factors With the recent unprecedented weather events where plants are subjected to extreme temperatures low and high it is imperative to find ways quickly to screen for varieties that can withstand these changes Novel ways or methods in the various disciplines physiology molecular phenotyping biochemical that can help to identify rapidly the traits related to yield in crops that can lead to an increase in productivity will be informative and help the scientific community to be up to date with recent progress
