Disease Management in Arid Land Crops S. Lodha,R. Mawar,B.S. Rathore,2008-06-01 Like other agro climatic zones of India crops in arid region also suffer enormously due to vagaries of plant diseases Certain agro climatic conditions favor

occurrence and development of these diseases which often takes a serious form resulting in heavy crop losses. Instances are there when growers have abandoned cultivation of cumin a cash crop which suffered heavily due to wilt and shifted to less remunerative or more irrigation requiring crops. Even several folk songs depict the plight of cumin growers. Similarly concurrent soil moisture and heat stress favor survival and multiplication of soil borne plant pathogens that causes root rots in many legumes oilseeds and trees. As arid lands are brought under irrigation several newer or hitherto unimportant diseases have also become serious. With the burgeoning population pressure arid region is now confronted with producing more grain and fodder per unit of land. Besides cultivation of drought hardy varieties of crops under improved agronomic practices management of plant diseases is yet another area which can accept this challenge to maximize productivity of arid lands. In the present compendium contributions were invited from experienced research workers working in specialized Institutes. An effort has been made to provide information on the occurrence of major diseases on principal cereals legumes oilseeds spices horticultural crops trees medicinal plants etc and on factors influencing their development and practical remedial measures to reduce crop losses.

Blast Disease of Cereal Crops S. Chandra Nayaka, Rajashekara Hosahatti, Ganesan Prakash, C. Tara Satyavathi, Rajan Sharma, 2021-04-21

Blast is an important foliar disease that infects the majority of cereal crops like rice finger millet pearl millet foxtail millet and wheat and thus resulting in a huge economic impact. The pathogen is responsible for causing epidemics in many crops and commonly shifts to new hosts. *Magnaporthe* spp is the most prominent cause of blast disease on a broad host range of grasses including rice as well as other species of Poaceae family. To date 137 members of Poaceae hosting this fungus have

been described in Fungal Databases This book provides information on all blast diseases of different cereal crops The pathogen evolves quickly due to its high variability and thus can quickly adapt to new cultivars and cause an epidemic in a given crop Some of the topics covered here include historical perspectives pathogen evolution host range shift cross infectivity and pathogen isolation use of chemicals fungicides genetics and genomics and management of blast disease in different cereal crops with adoption of suitable methodologies In the past two decades there have been significant developments in genomics and proteomics approaches and there has been substantial and rapid progress in the cloning and mapping of R genes for blast resistance as well as in comparative genomics analysis for resolving delineation of Magnaporthe species that infect both cereals and grass species Blast disease resistance follows a typical gene for gene hypothesis Identification of new Avr genes and effector molecules from Magnaporthe spp can be useful to understand the molecular mechanisms involved in the fast evolution of different strains of this fungal genus Advances in these areas may help to reduce the occurrence of blast disease by the identification of potential R genes for effective deployment Additionally this book highlights the importance of blast disease that infects different cereal hosts in the context of climate change and genomics approaches that may potentially help in understanding and applying new concepts and technologies that can make real impact in sustainable management of blast disease in different cereal crops Breeding, Biotechnology and Seed

Jauhar, 2006-01-13 Summarizing landmark research Volume 2 of this essential series furnishes information on the availability of germplasm resources that breeders can exploit for producing high yielding cereal crop varieties Written by leading international experts this volume offers the most comprehensive and up to date information on employing genetic resources t **Millet and Pseudo**

Cereals Mohar Singh, Salej Sood, 2020-09-20 Millets and Pseudo Cereals is the first comprehensive resource to focus on the potential crop improvements through genetic enhancements. The choice of food crop for a region is primarily determined by the conditions of climate and soil. Once labelled as orphan crops, millets and pseudo cereals are now known as miracle grains due to their adaptation to harsh conditions and high nutritional quality. Small millets and pseudo cereals are now seen to occupy special niches through their ability to adapt to challenging conditions. These crops have a comparative advantage in marginal lands where they withstand stress conditions and contribute to sustainable production. They also contribute to the diversity, richness, and production stability of agro ecosystems. Millets include sorghum, pearl millet, finger millet, foxtail millet, proso millet, barnyard millet, little millet, and kodo millet, while the other group, which are not cereals but consumed as cereals and generally referred to as pseudo cereals, comprises of grain amaranths, buckwheat, and chenopods. Millets and Pseudo Cereals presents current information on the genetic architecture of important economic traits and the genomic resources for gene enabled breeding. This compilation contains information on the global status, available germplasm resources, nutritional value, breeding advancements, genomics applications, and sustainability of agriculture through millets and pseudo cereals cultivation. This book is a valuable resource for those conducting research and exploring new areas for advancing crop genetic understanding. Explores the current challenges of pseudo cereal production and how that can be overcome by developing genetic and breeding resources using appropriate germplasm. Provides holistic information on millets and pseudo cereals. Features global perspectives from an international contributing team of authors.

Macrophomina Phaseolina Pankaj Kumar, Ramesh Chandra Dubey, 2023-06-08 Macrophomina Phaseolina: Ecobiology, Pathology, and Management provides insights into the sustainable prevention and treatment of this wide spread challenge to plant health. With a focus on agricultural as well as non food plant challenges, the book highlights diverse approaches and provides central insights. The pathogen of M phaseolina affects the fibrovascular system of roots and basal internodes of its host, impeding the transport of water and nutrients to the upper parts of the plant, thus resulting in progressive wilting, premature drying, and dying, loss of vigor, and reduced yield. Finally, the book explores the interaction of M phaseolina with soil microbes and ecological conditions to control disease causing strategies. Recognizing the necessity that strategies applied to manage the disease should have no or minimum effect on ecological resources, the book focuses on alternative sustainable management technologies such as mix cropping, the use of antagonistic bacteria and fungi, and microbial biosurfactants, plant growth promoting antagonistic rhizobacteria, and how cultural practices may also play an important role. Identifies plant diseases caused by Macrophomina phaseolina. Explores M phaseolina genetic diversity. Highlights pesticide tolerance and alternative control options.
